

SHETH MVLU COLLEGE

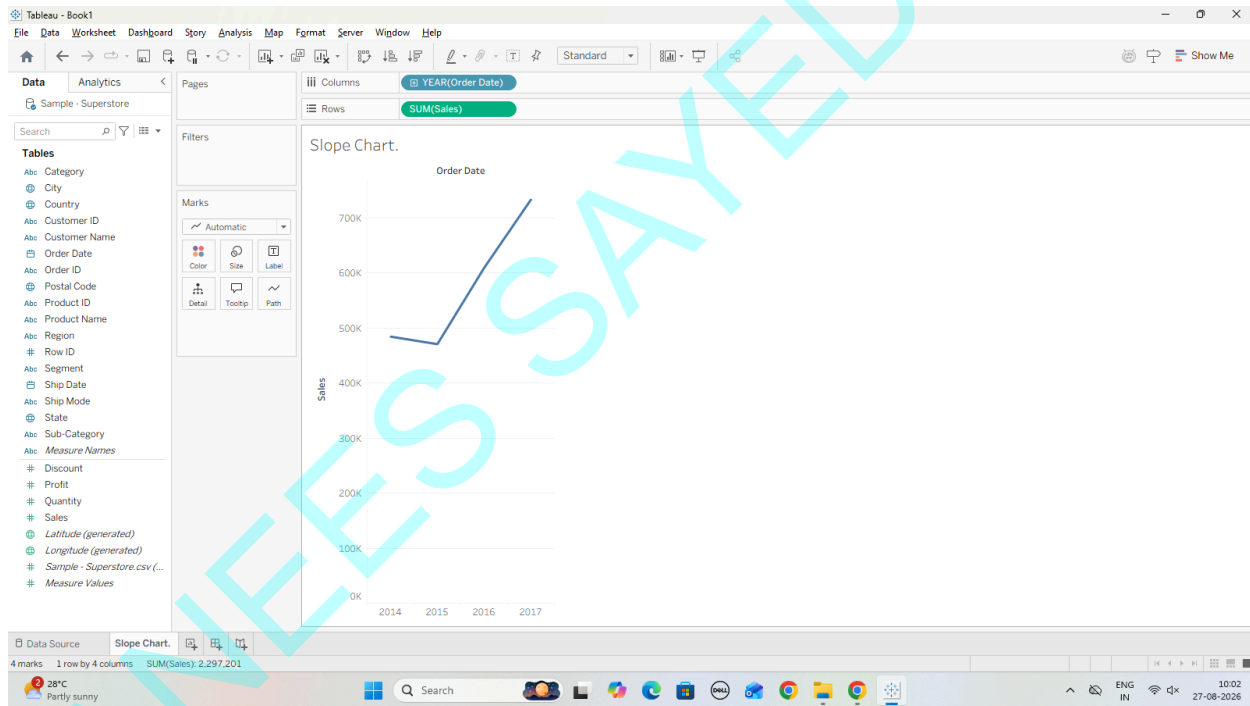

SUBJECT:- TABLEAU

AIM:-

- a) Create slope charts and lollipop charts
- b) Design waterfall charts
- c) Build sparklines for trend analysis
- d) Implement sheet swapping for dynamic dashboards
- e) Create custom geographic territories
- f) Use background images in dashboards
- g) Apply animation and transparency techniques

A: Create Slope Charts and Lollipop Charts

1. Open Tableau Desktop connected to Superstore.csv.
2. Create a new worksheet and rename it: Slope Chart.
3. Drag Order Date to the Columns shelf. (It will appear as YEAR(Order Date)).
4. Drag Sales to the Rows shelf (appears as SUM(Sales)).

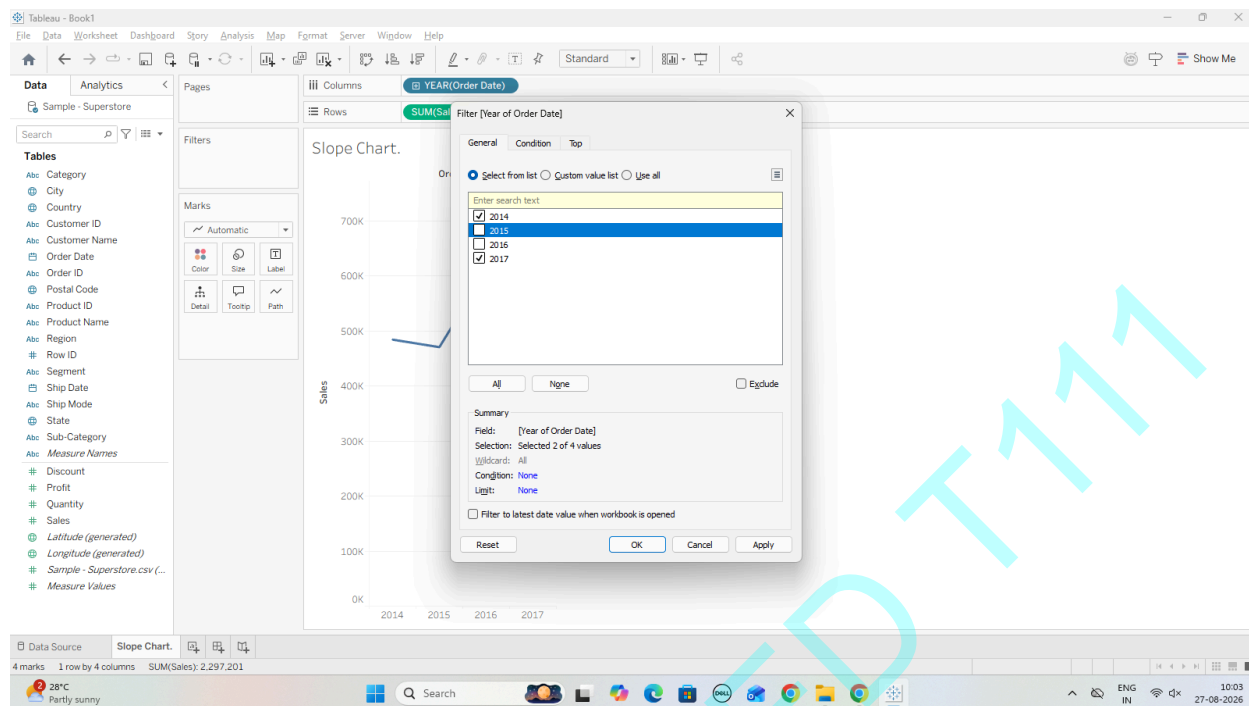

Step 2: Filter to Baseline & Comparison Years

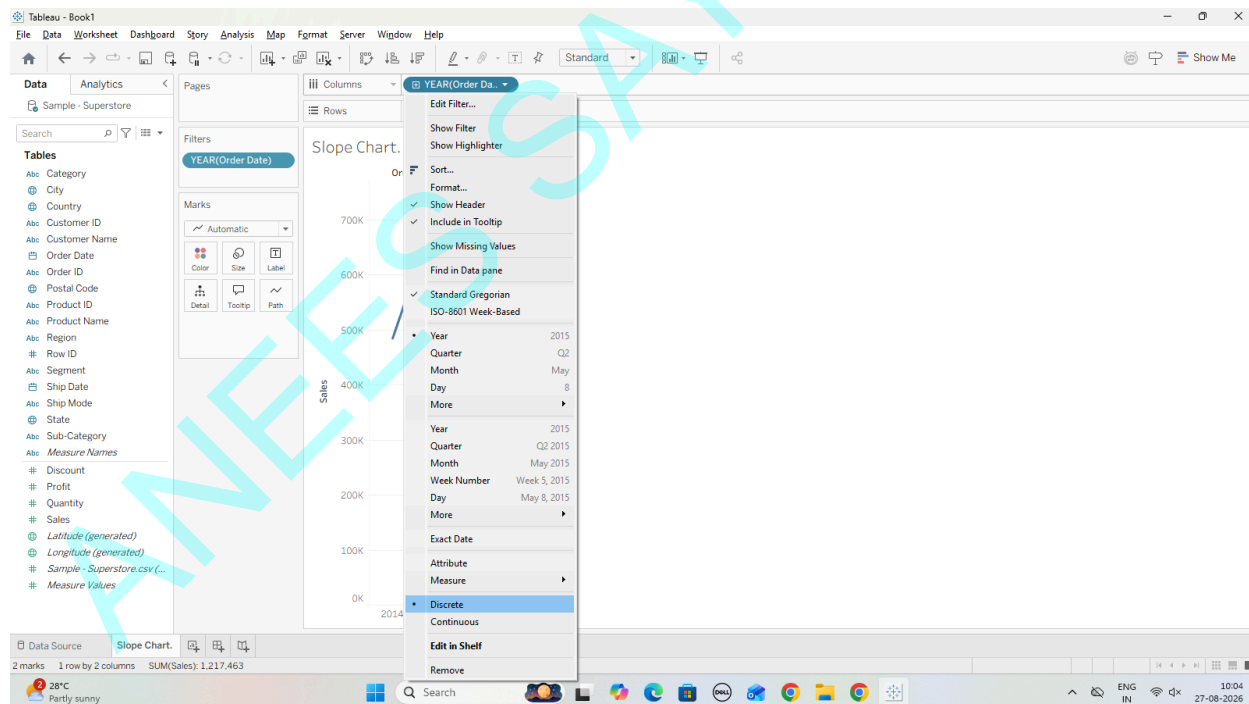

1. Hold Ctrl (or Cmd on Mac), drag Order Date to the Filters shelf, select Years, and click Next.
2. Check only the first year (2014) and the last year (2017). Click OK

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

3. Right-click on the YEAR(Order Date) pill on the Columns shelf --> select Discrete(blue pill) so it acts as two distinct category pillars.

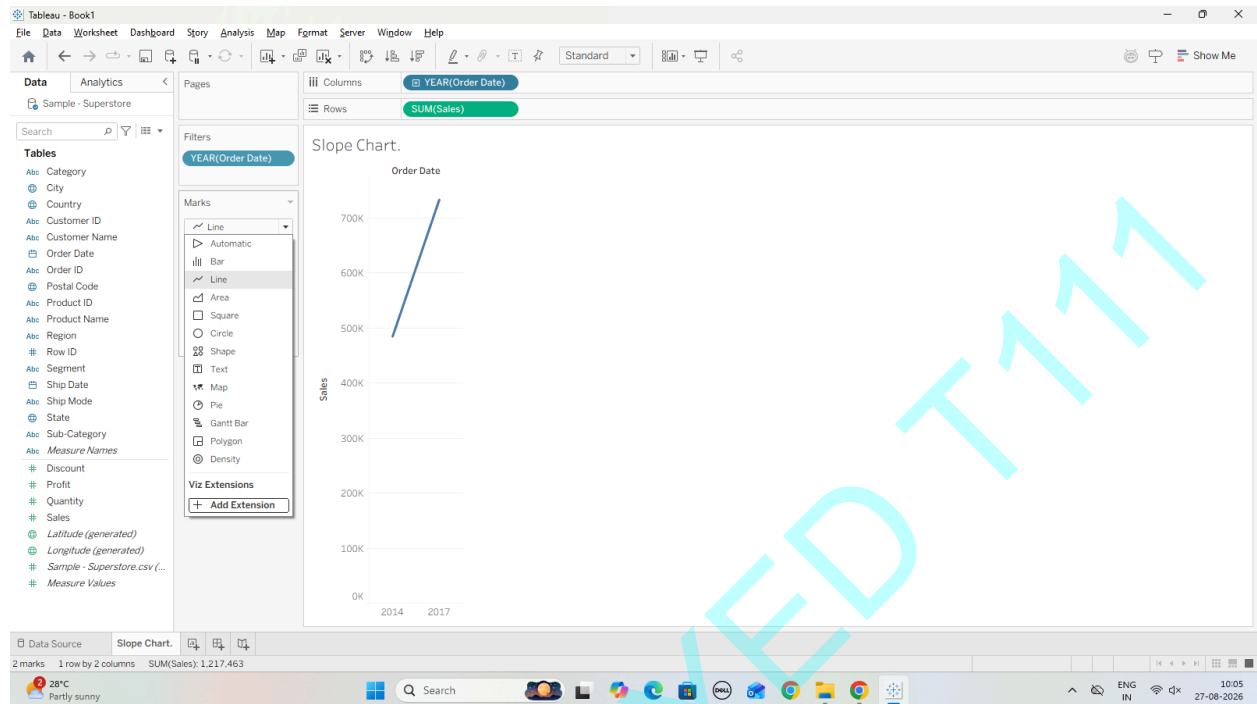

SHETH MVLU COLLEGE

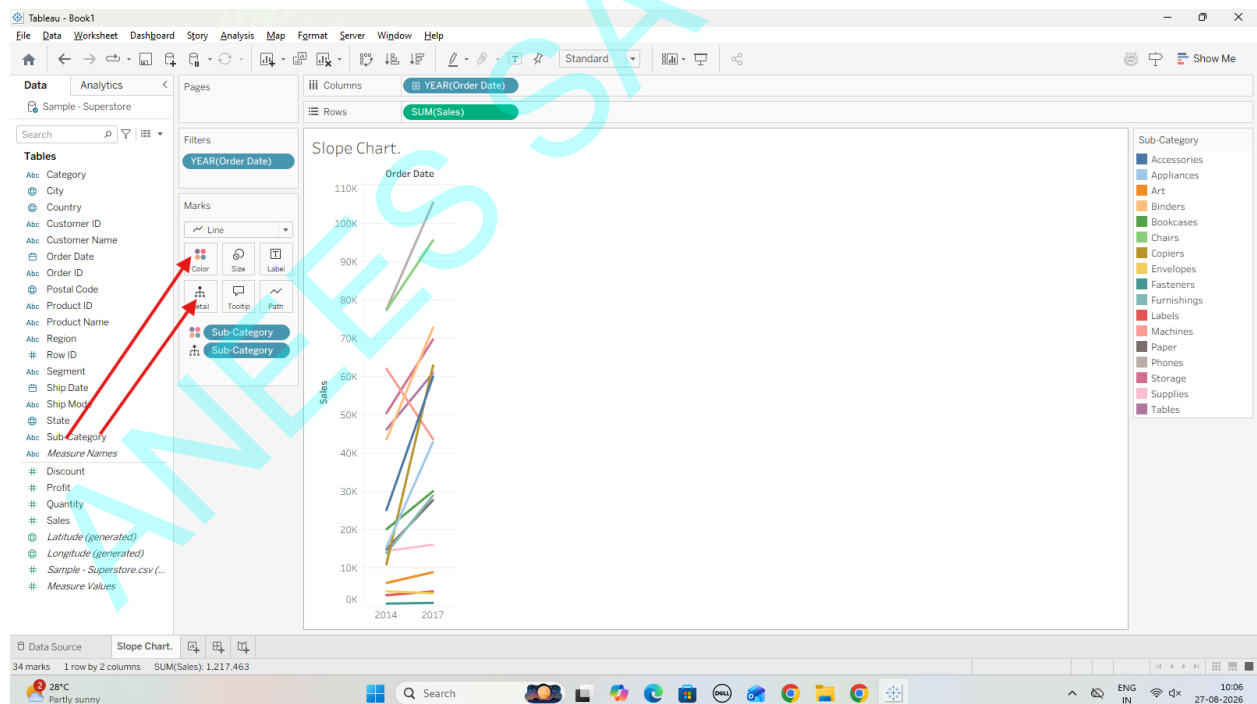

SUBJECT:- TABLEAU

Step 3: Disaggregate by Sub-Category

1. On the Marks card, change the mark type dropdown from Automatic to Line.

2. Drag Sub-Category onto the Detail tile (and onto the Color tile) on the Marks card.

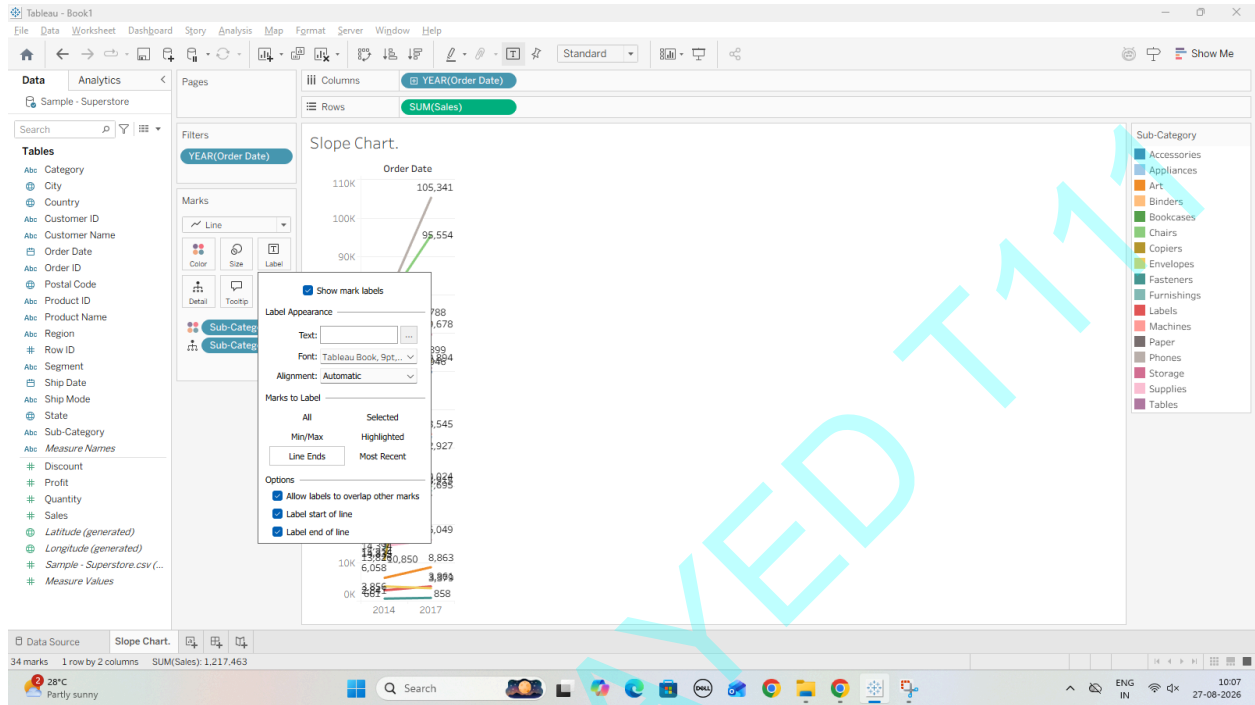

Step 4: Format Labels and Endpoints

ANEES SAYED T111

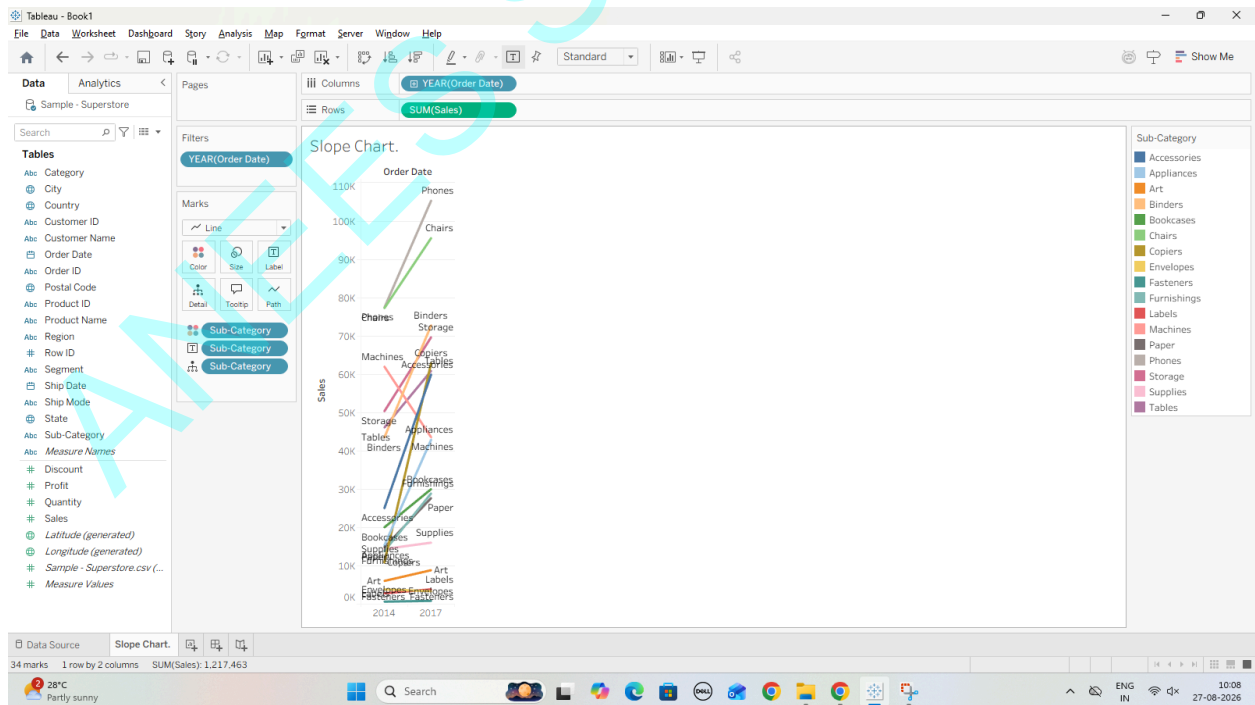

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

- On the Marks card, click the Label tile:
- o Check Show mark labels.
 - o Under Marks to Label, choose Line Ends.
 - o Check Label start of line and Label end of line.

- Drag Sub-Category onto Label on the Marks card to display the product name directly at the line endpoints.

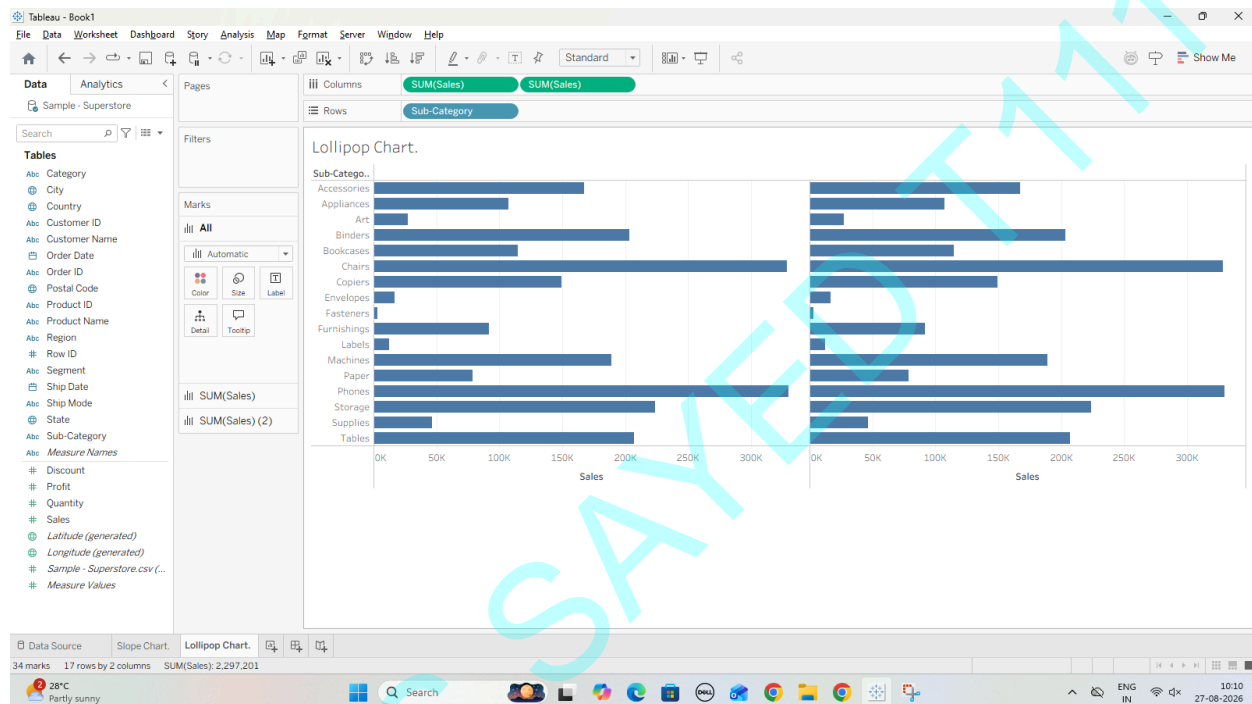

2. Create a Lollipop Chart (Sales with Profit Highlighting)

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Step 1: Set Up the Base Worksheet

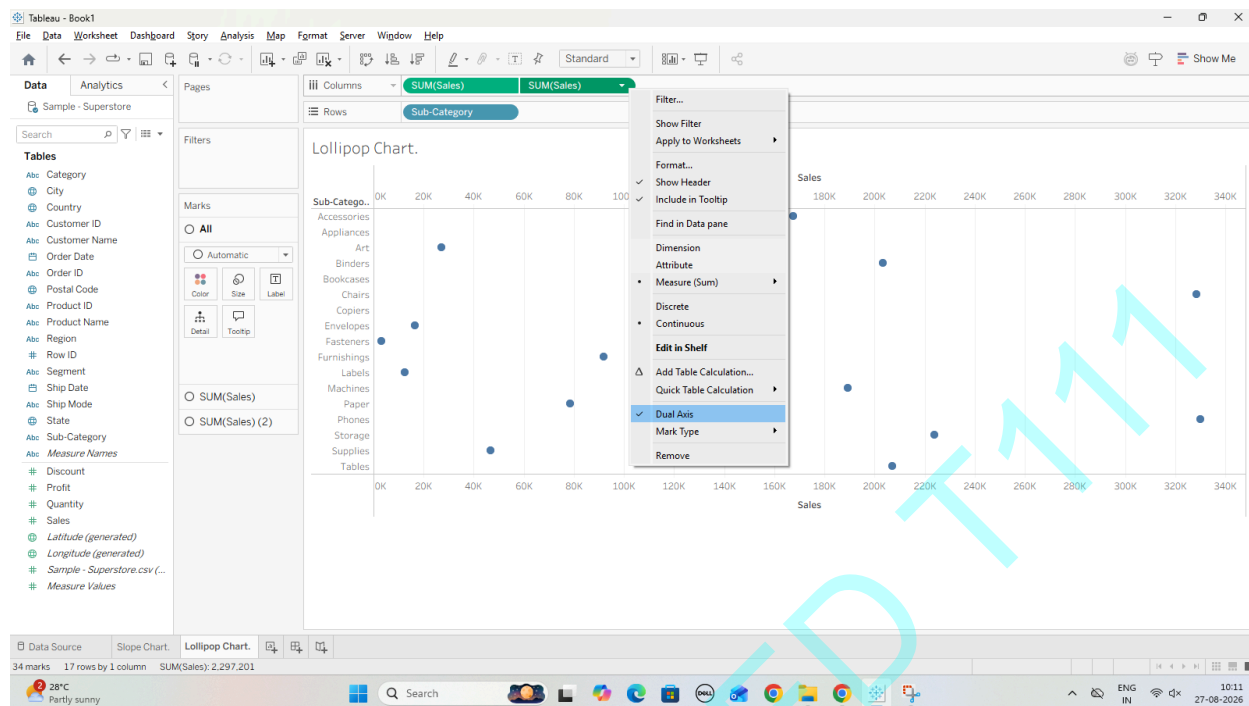

1. Create a new worksheet and rename it: Lollipop Chart.
2. Drag Sub-Category onto the Rows shelf.
3. Drag Sales onto the Columns shelf.
4. Drag Sales onto the Columns shelf a second time (creating two adjacent SUM(Sales) pills on Columns).

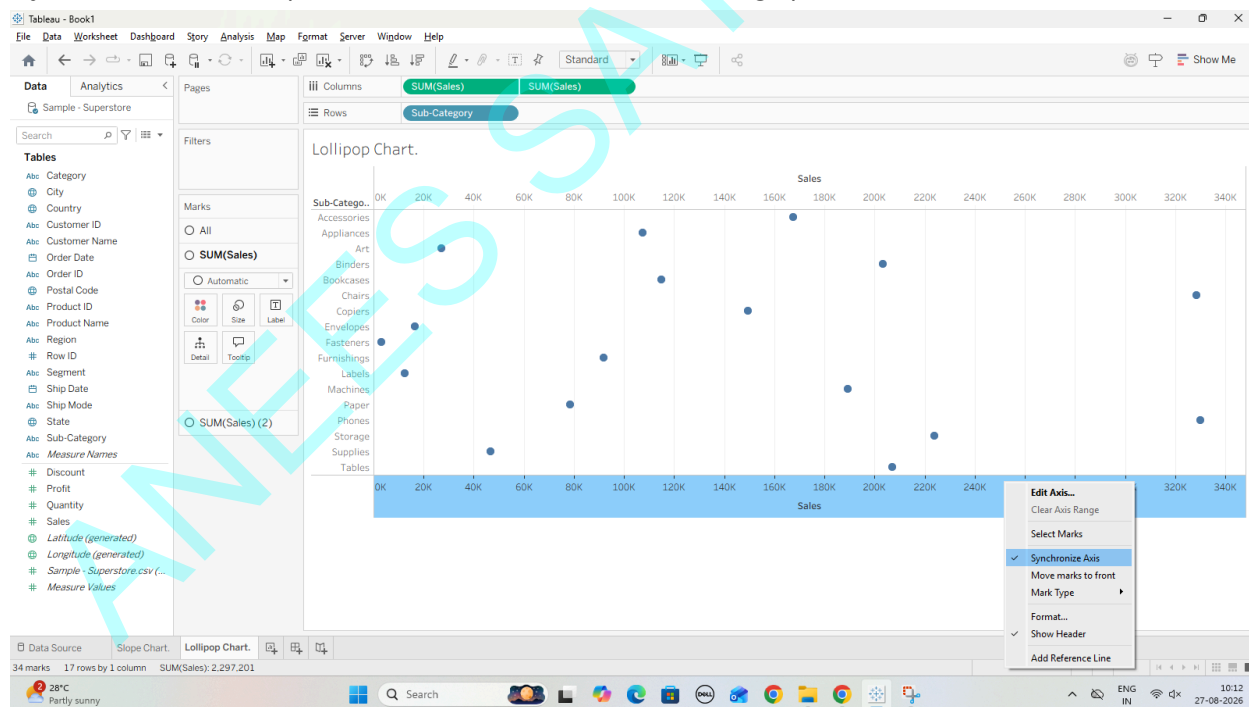

- Step 2: Convert to Dual Axis 1. Right-click the second SUM(Sales) pill on the Columns shelf --> select Dual Axis.

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

2. Right-click the top numerical axis in the visualization view --> select Synchronize Axis (crucial to ensure both axes align).

SHETH MVLU COLLEGE

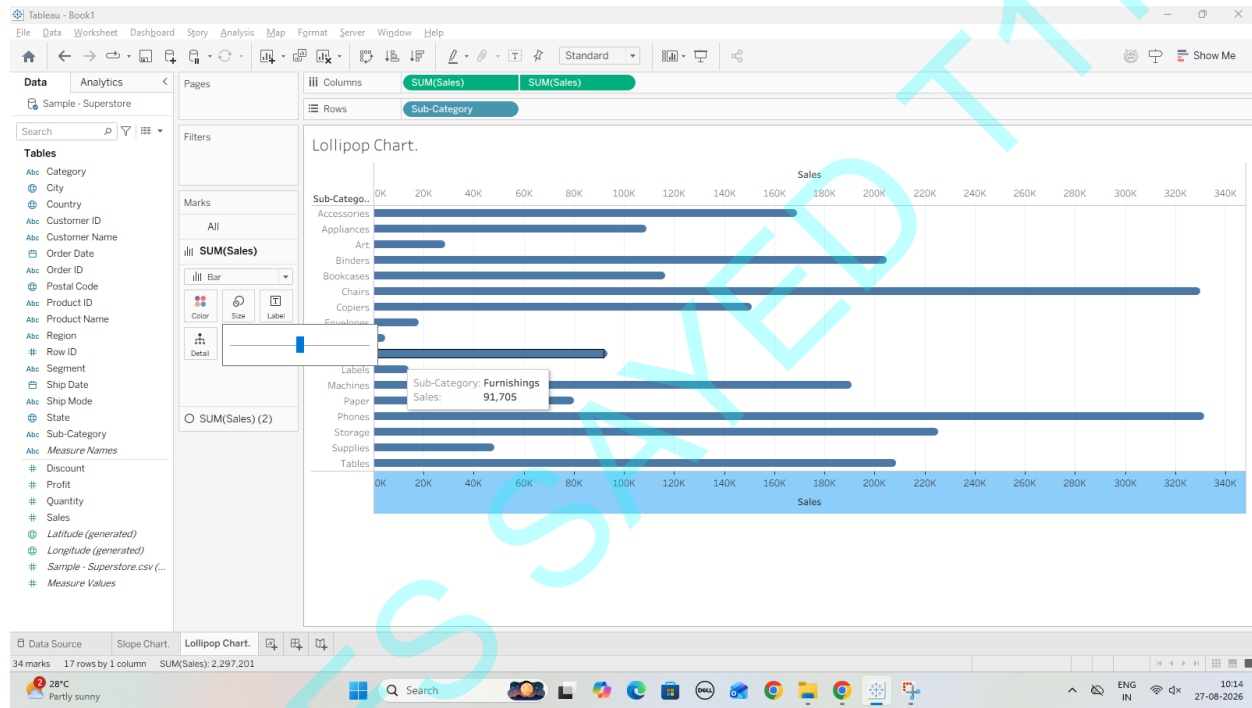

SUBJECT:- TABLEAU

Step 3: Configure the Marks Cards

In the Marks pane on the left, you will now see three cards: All, SUM(Sales) (first mark), and SUM(Sales) (2) (second mark)

1. Configure the Stem (Bar):

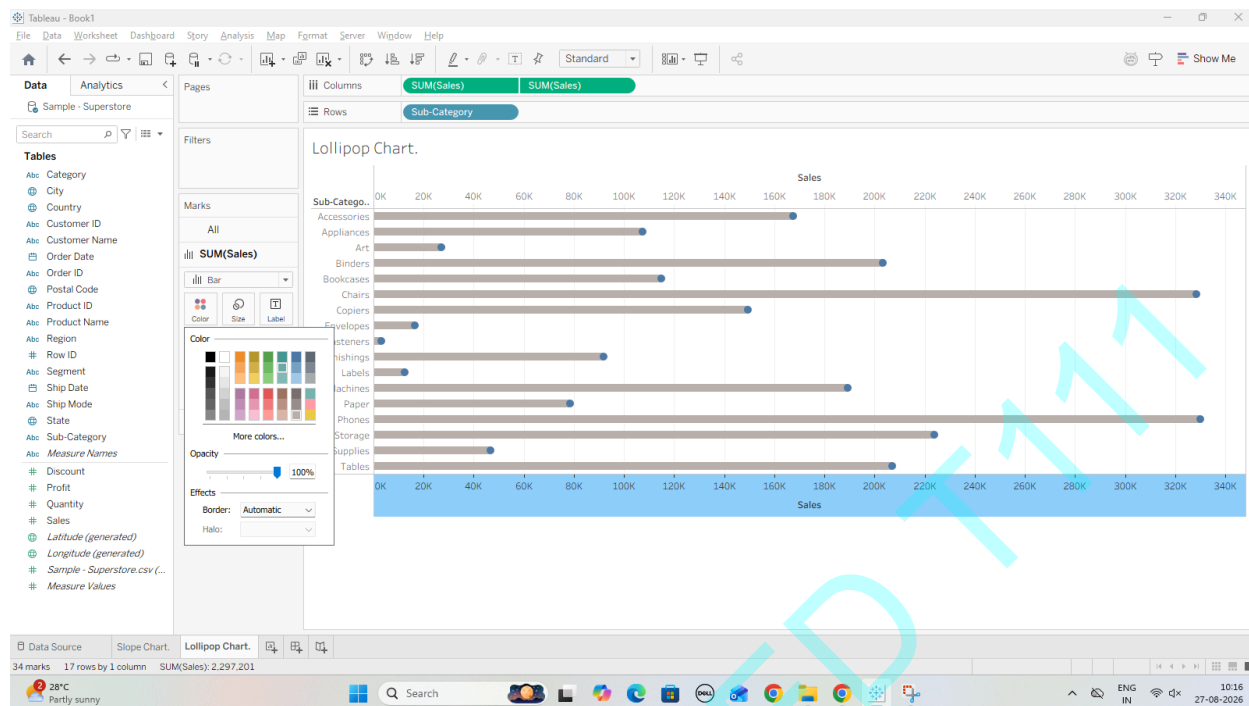

- o Click on the first SUM(Sales) mark card.
- o Change the mark type dropdown to Bar.
- o Click the Size tile --> pull the slider down until the bars become thin, elegant stems.

Click Color --> set the bar color to a neutral gray (e.g., #B0B0B0).

SHETH MVLU COLLEGE

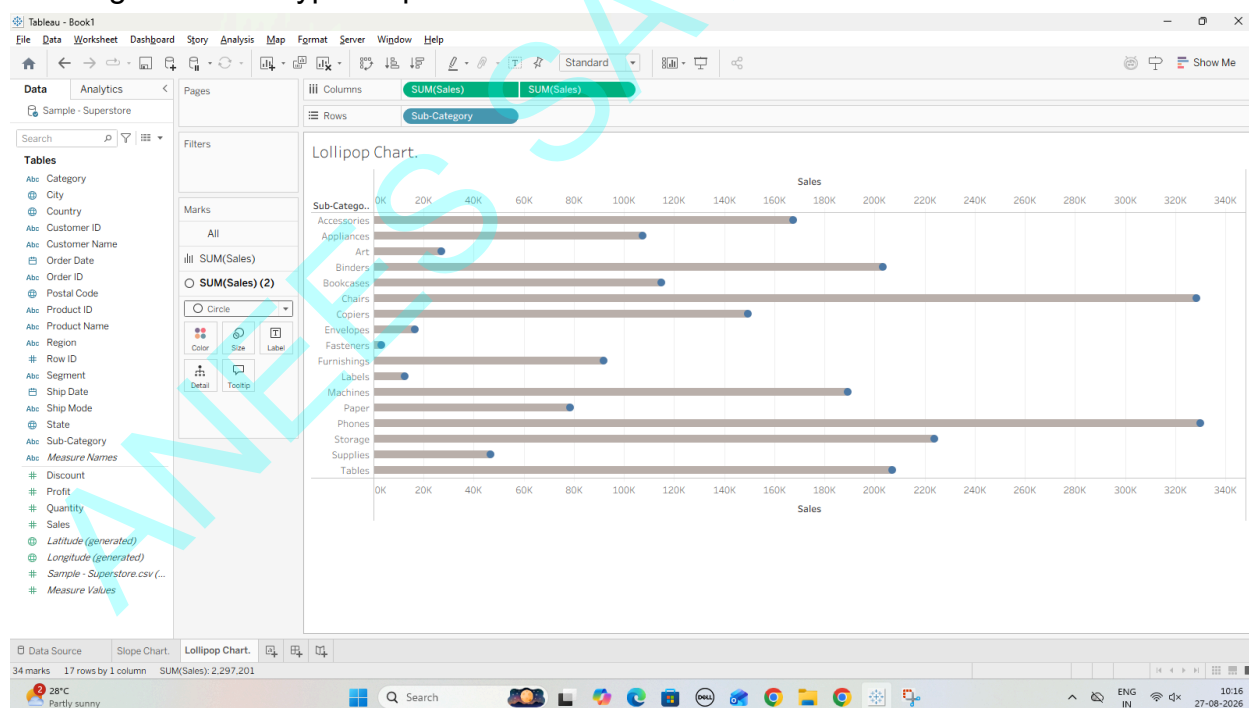

SUBJECT:- TABLEAU

2. Configure the Head (Circle):

o Click on the second SUM(Sales) (2) mark card.

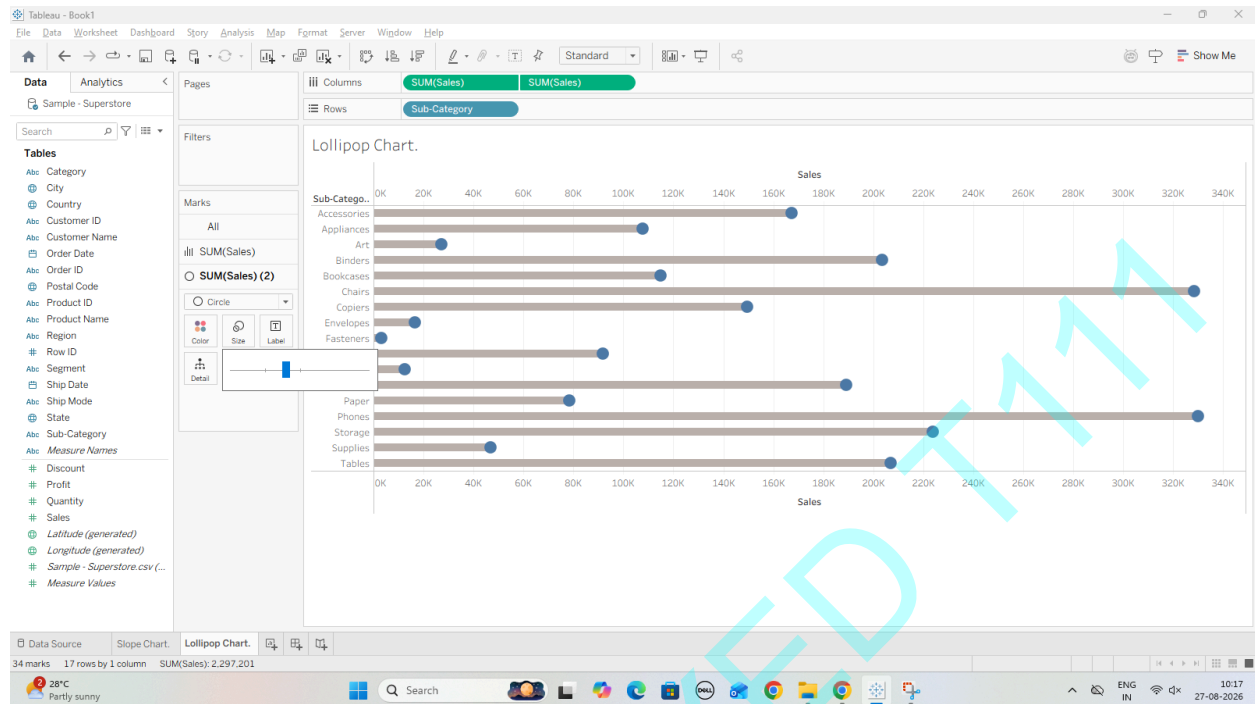

o Change the mark type dropdown to Circle.

SHETH MVLU COLLEGE

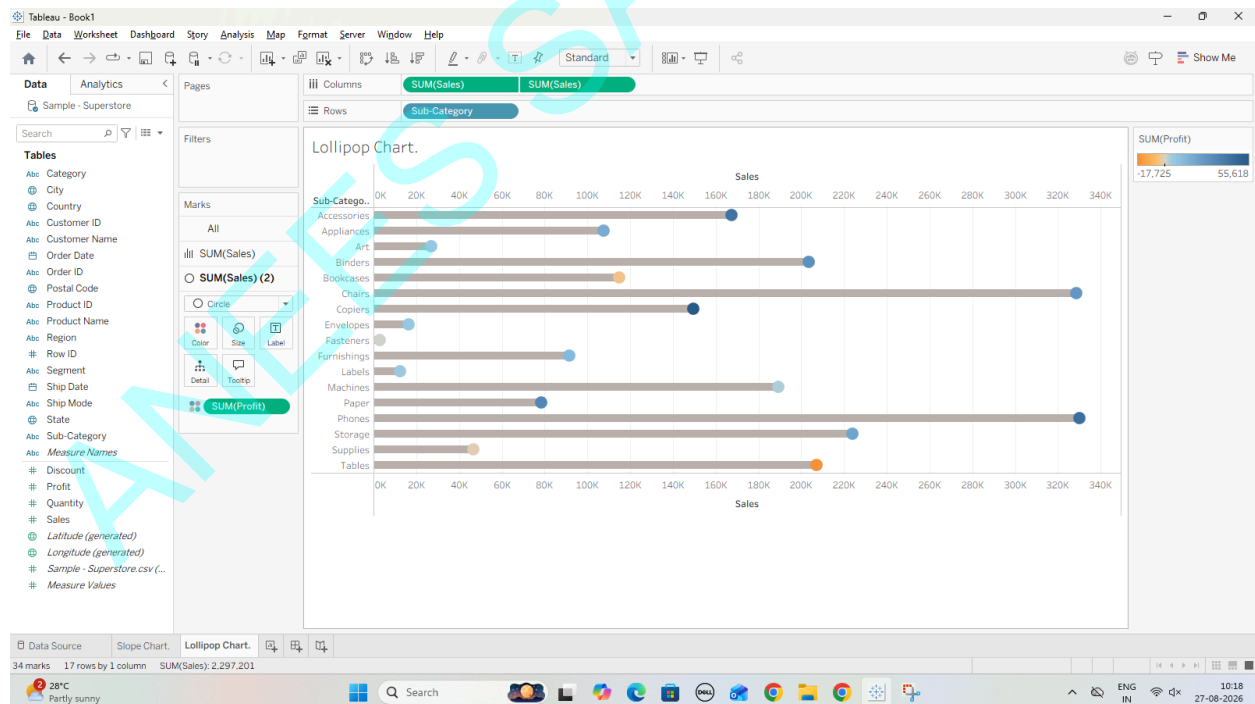

SUBJECT:- TABLEAU

Click the Size tile --> increase the circle size so it sits neatly at the tip of each bar stem.

Drag Profit onto the Color tile of this second marks card.

(Observation): Sub-categories like Tables immediately show negative profit (red/orange) while having high sales.

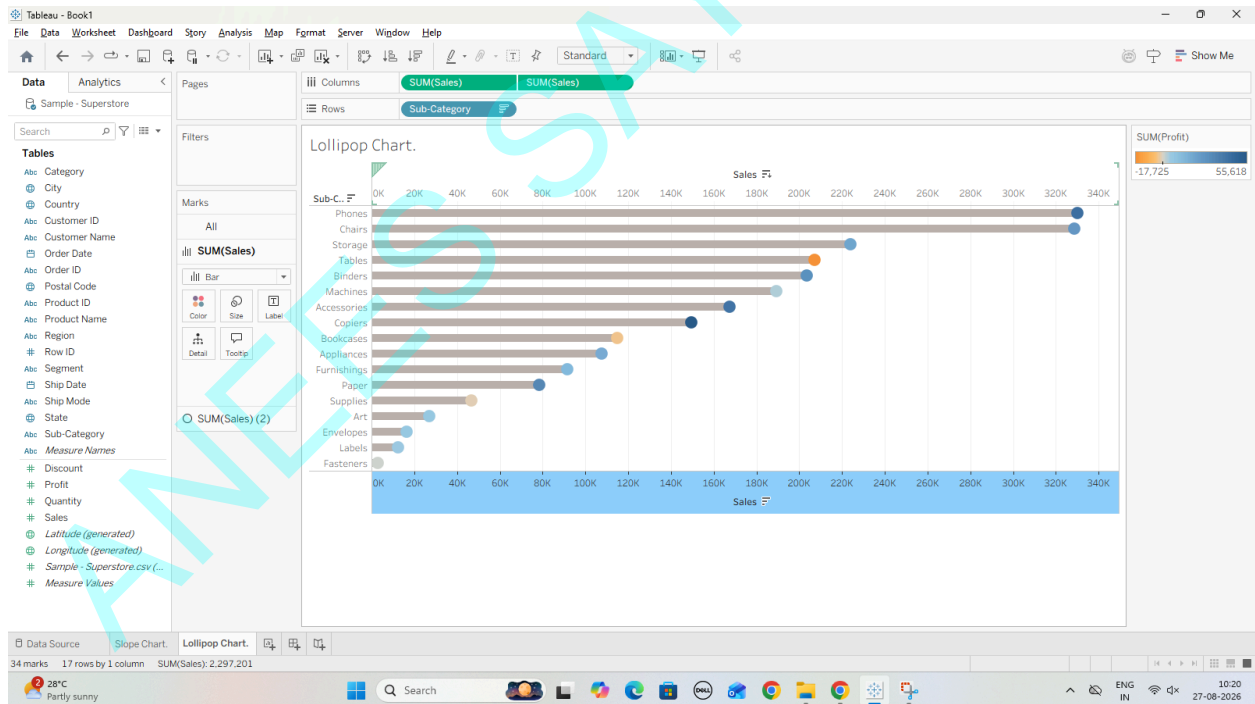

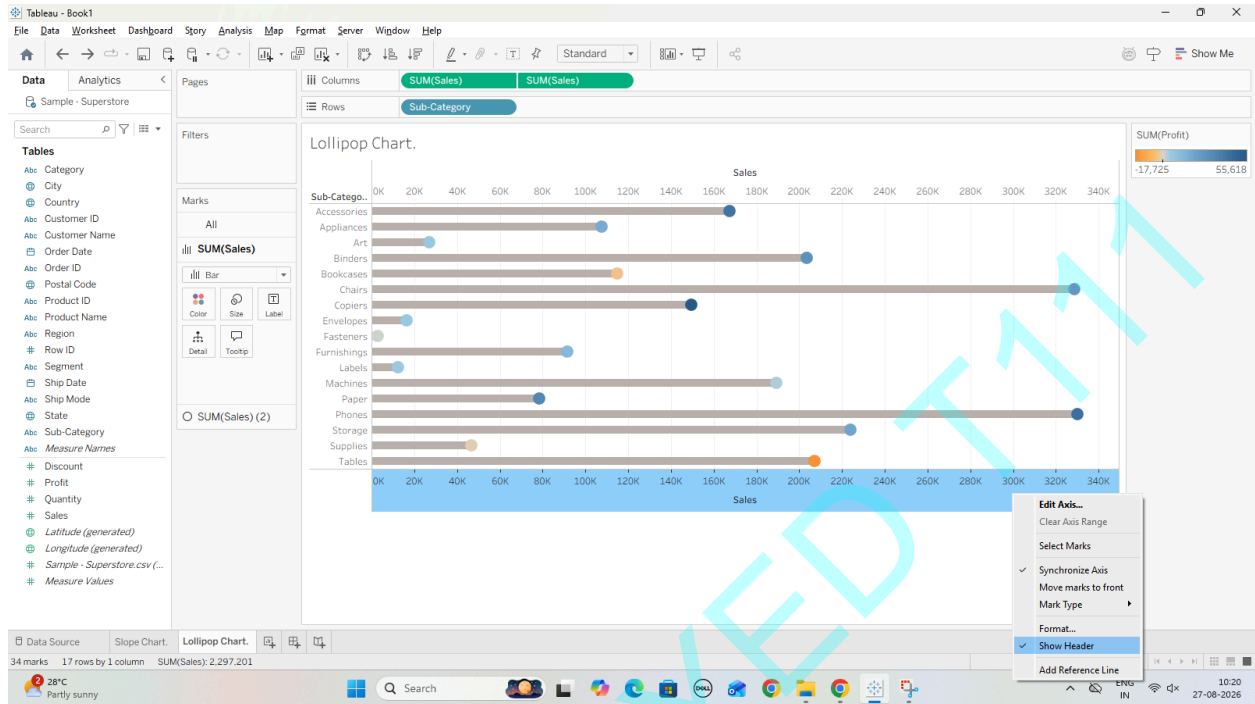

Step 4: Clean Up Axis Formatting

ANEES SAYED T111

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

1. Right-click the top header axis --> uncheck Show Header
2. Click the Sort Descending button in the top toolbar to sort by total sales.

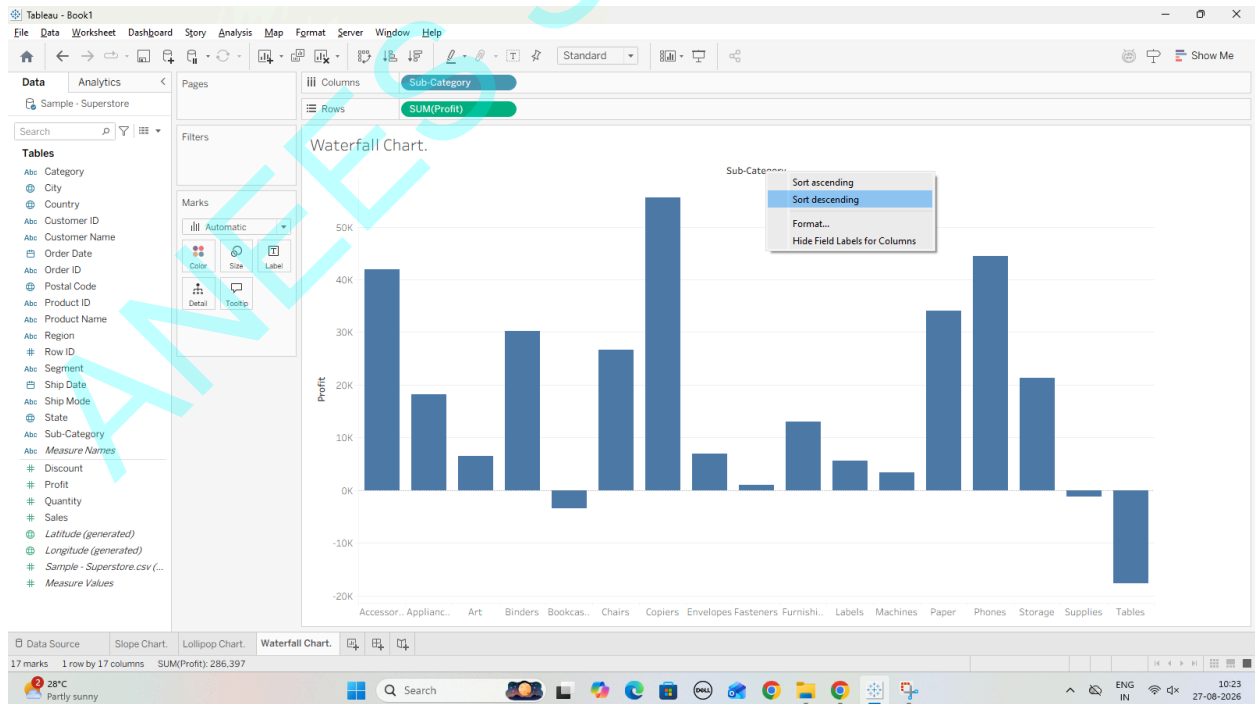

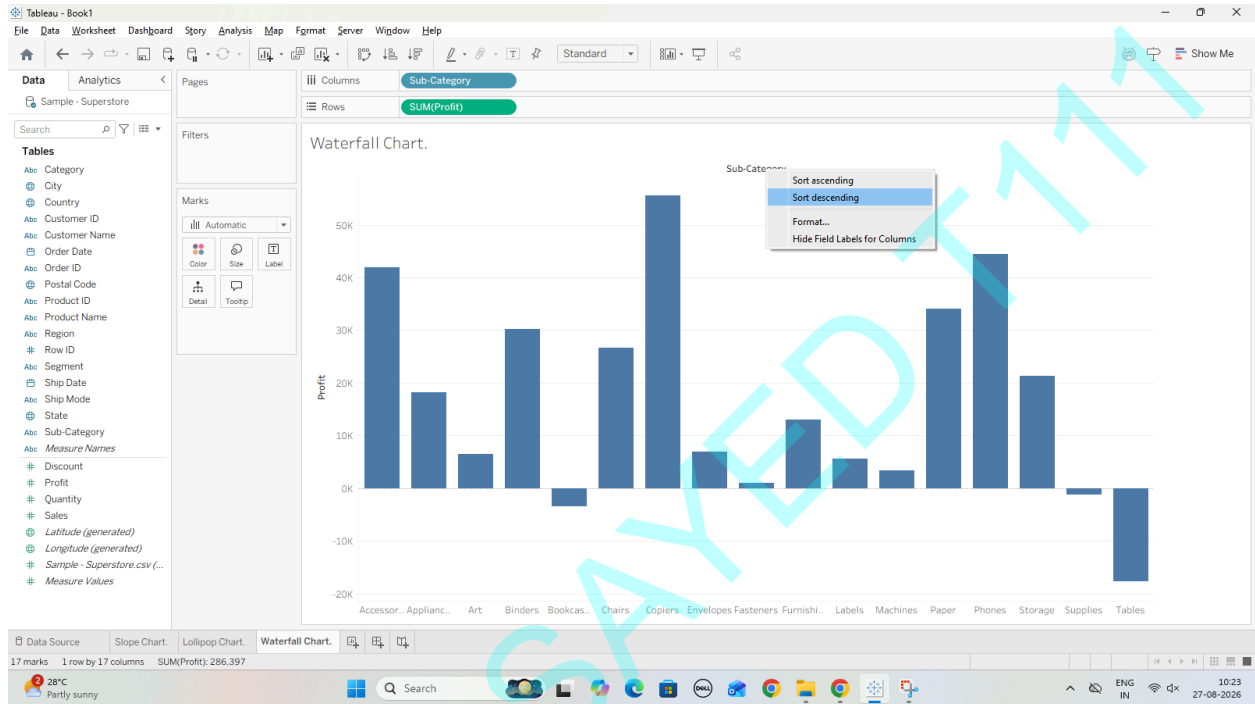

B: Design Waterfall Charts

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Step 1: Set Up the Base Worksheet

1. In Tableau Desktop, create a new worksheet and rename it: Waterfall Chart.
2. Drag Sub-Category onto the Columns shelf.
3. Drag Profit onto the Rows shelf (appears as SUM(Profit)).
4. Sort the view: Click the Sort Descending button on the top toolbar so the highest profit sub-categories appear first.

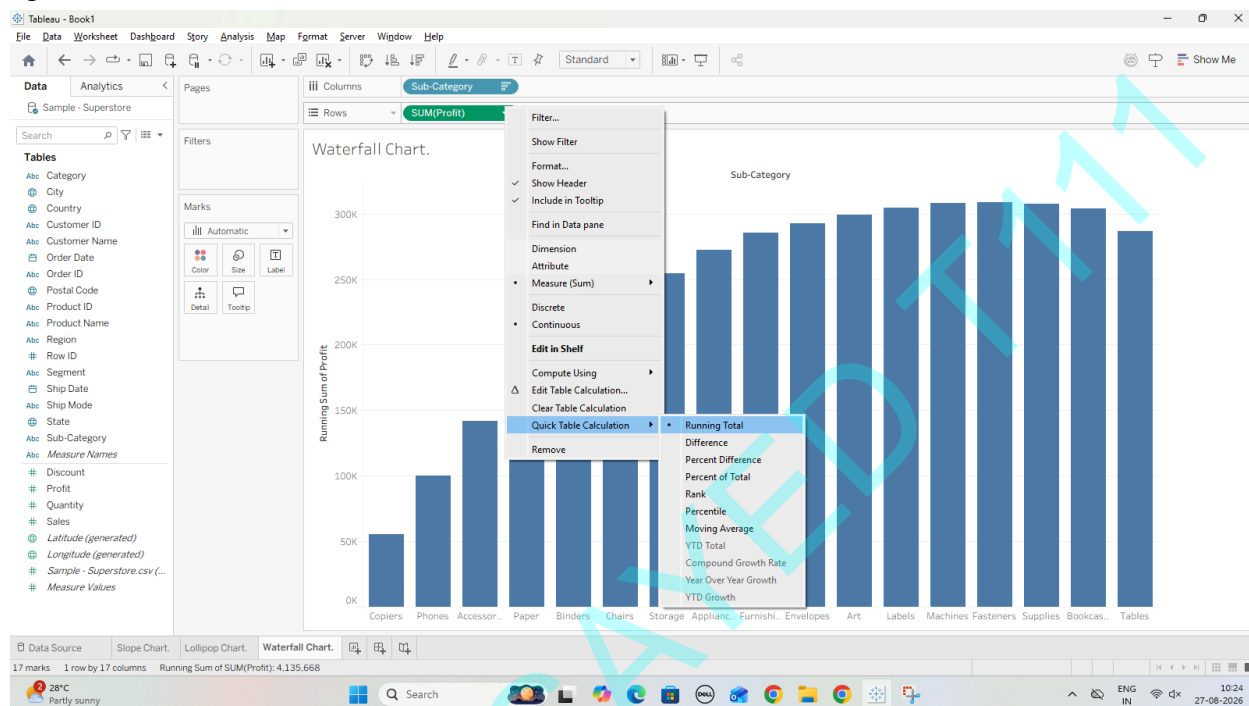

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Step 2: Apply Running Total Table Calculation

1. Right-click the SUM(Profit) pill on the Rows shelf.
2. Select Quick Table Calculation --> Running Total.
3. Notice that the line/bars now accumulate upward across the columns from left to right.

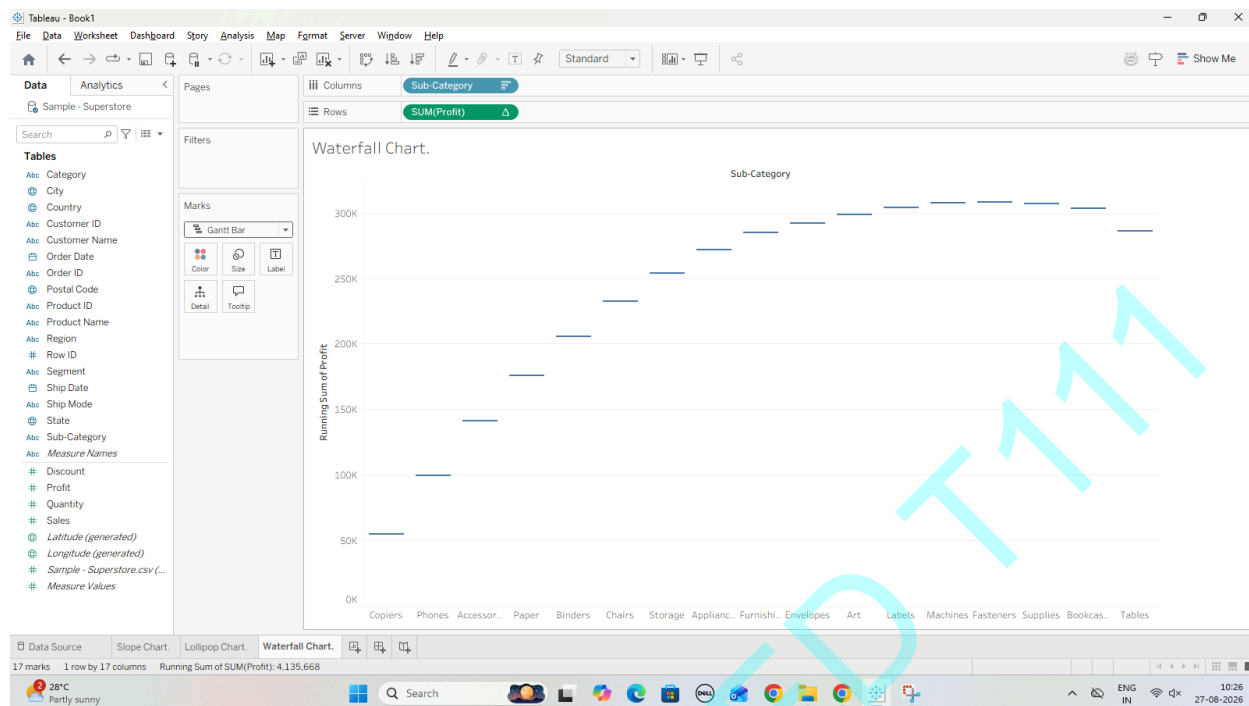

Step 3: Switch Mark Type to Gantt Bar

1. On the Marks card, change the dropdown selector from Automatic (or Bar) to Gantt Bar.
2. You will see thin horizontal baseline markers representing the running total cumulative level at each sub-category step.

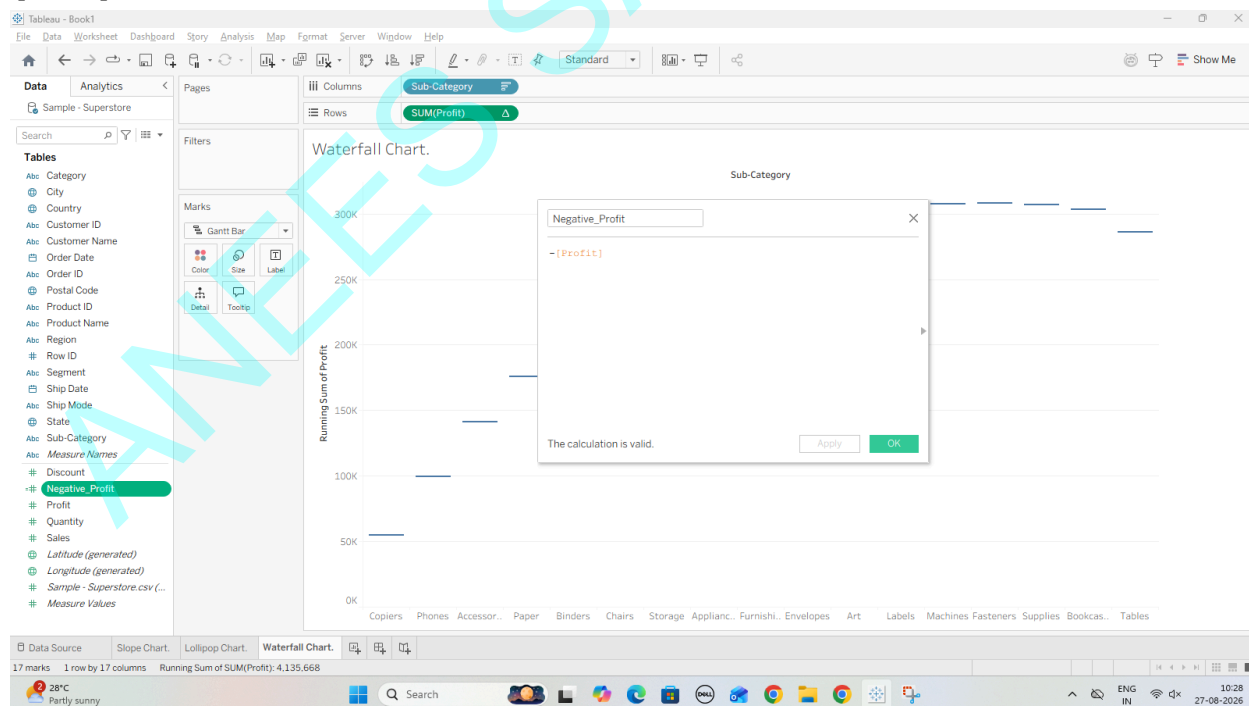

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Step 4: Create the Negative Profit Sizing Calculation

1. In the Data Pane on the left, right-click an empty area --> select Create Calculated Field....
2. Set the field details: o Field Name: Negative_Profit o Tableau Formula: Code snippet $-\text{[Profit]}$

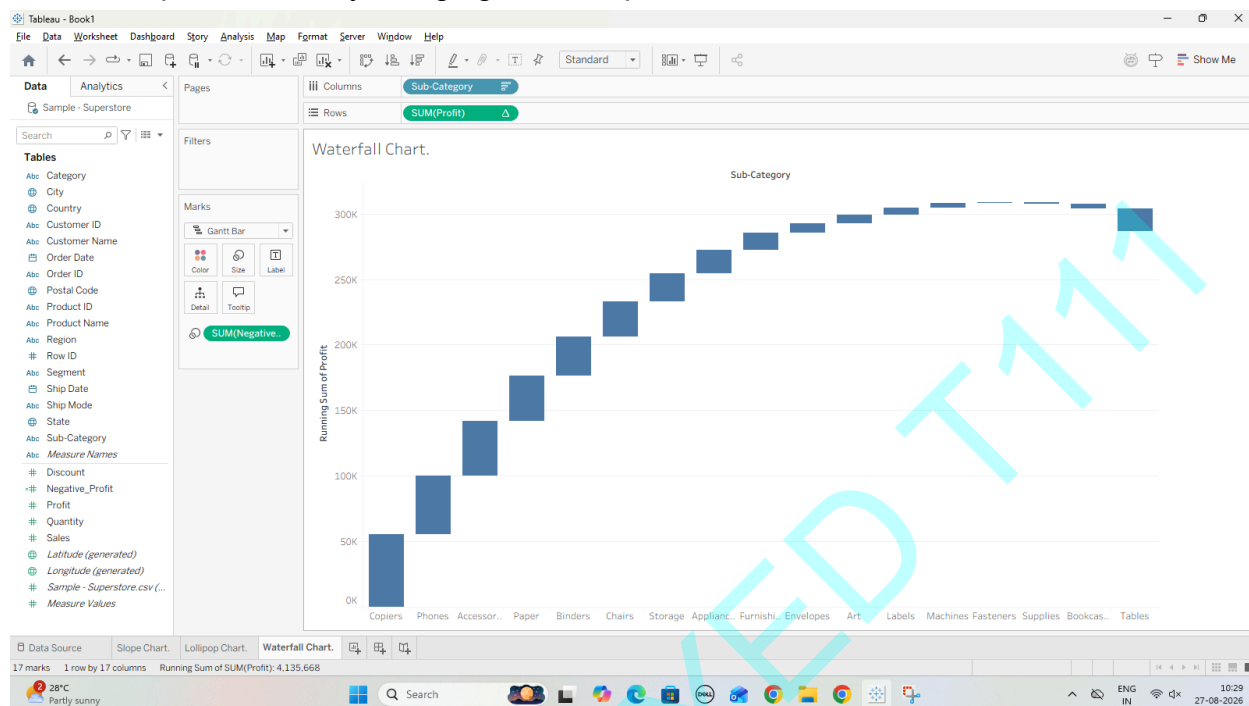

Step 5: Size and Color the Waterfall Blocks

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

1. Drag Negative_Profit onto the Size tile on the Marks card. o The floating Gantt bars will now expand vertically, bridging each step to the next.

2. Drag Profit (original measure) onto the Color tile on the Marks card.

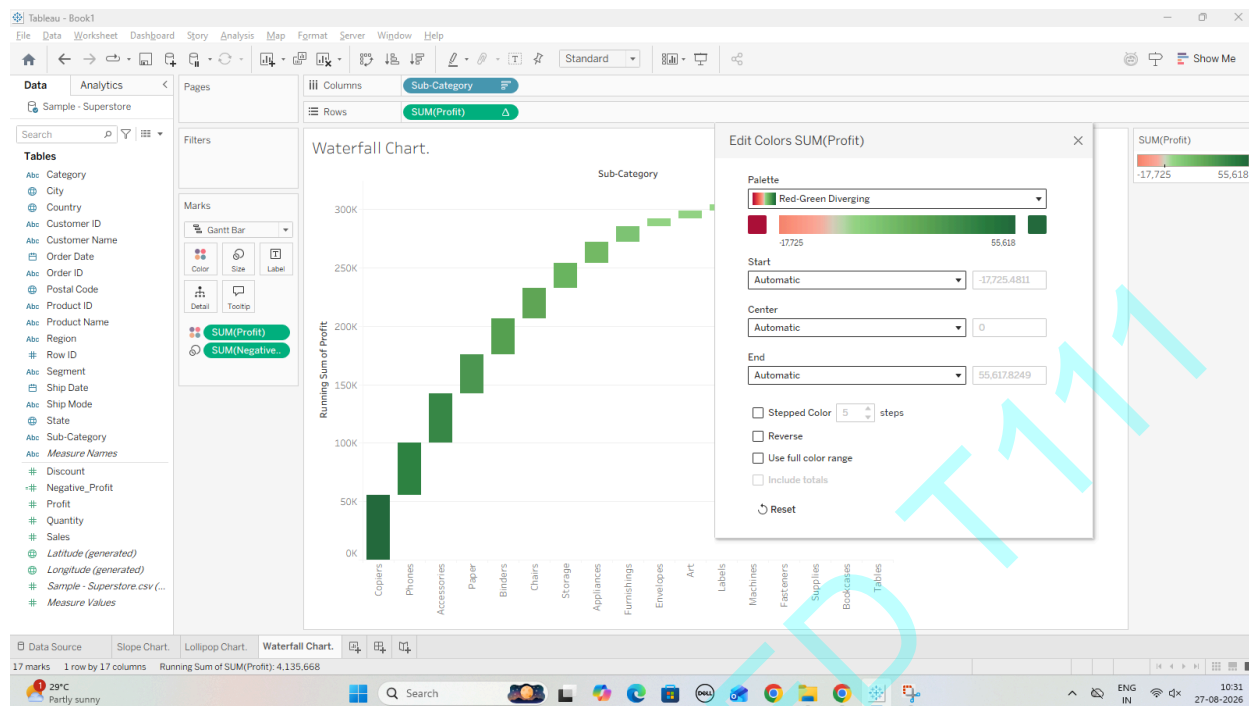

3. Click the Color tile --> select Edit Colors...:

o Change Palette to Red-Green Diverging (or Red-Blue).

o Check Use Full Color Range or set Center at 0.

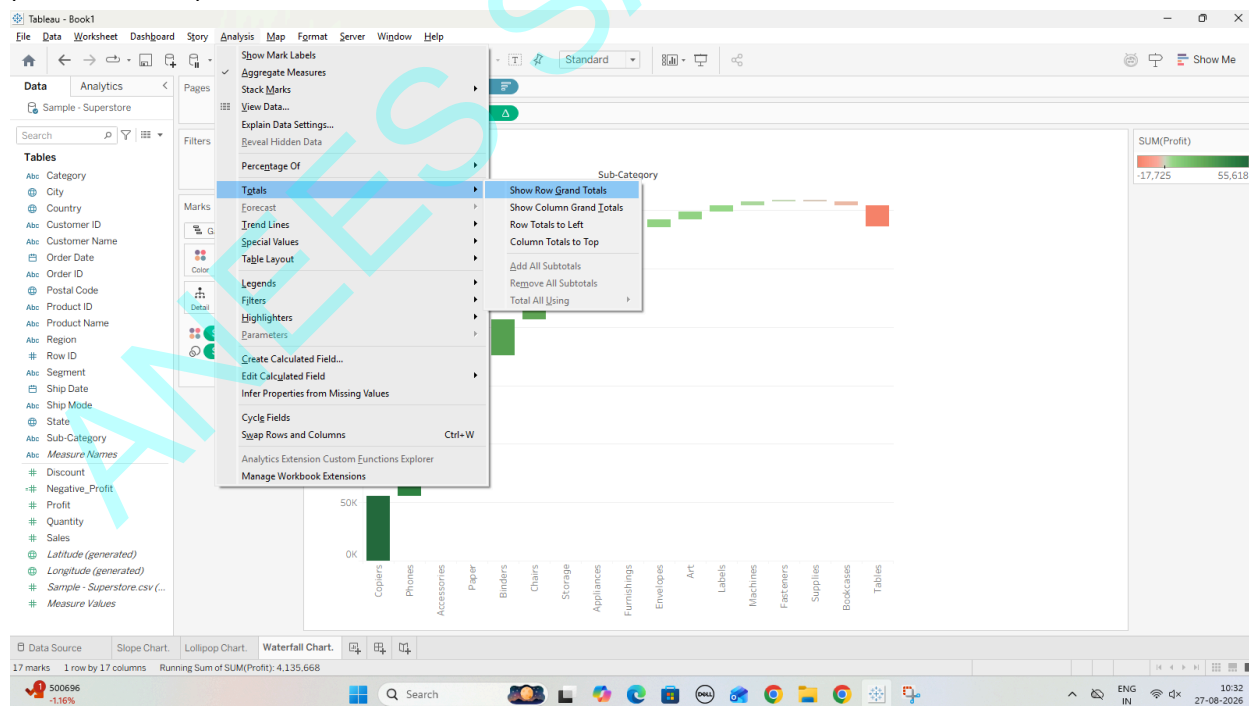

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

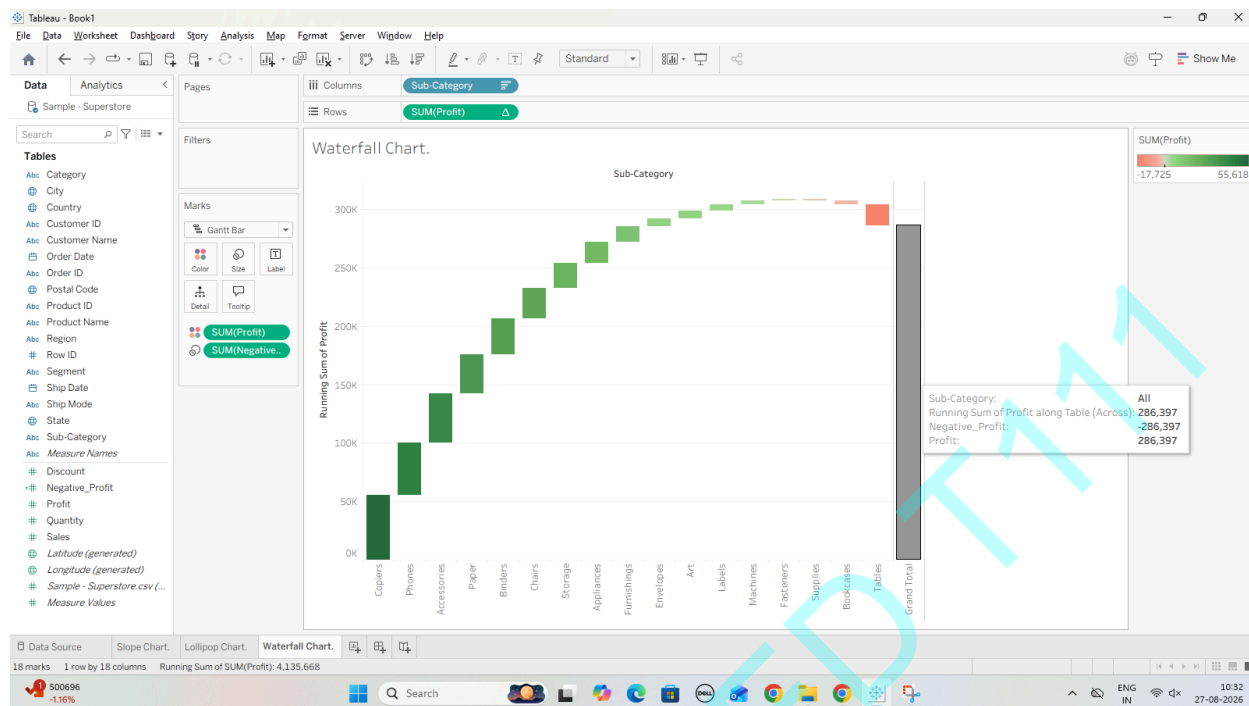

Step 6: Add Grand Totals to Close the Waterfall

1. Go to the top application menu: select **Analysis** --> **Totals** --> **Show Row Grand Totals** (or Show Column Grand Totals depending on orientation).
2. A final anchor pillar will appear at the right end showing the final cumulative profit (\$286,397.02)

SHETH MVLU COLLEGE

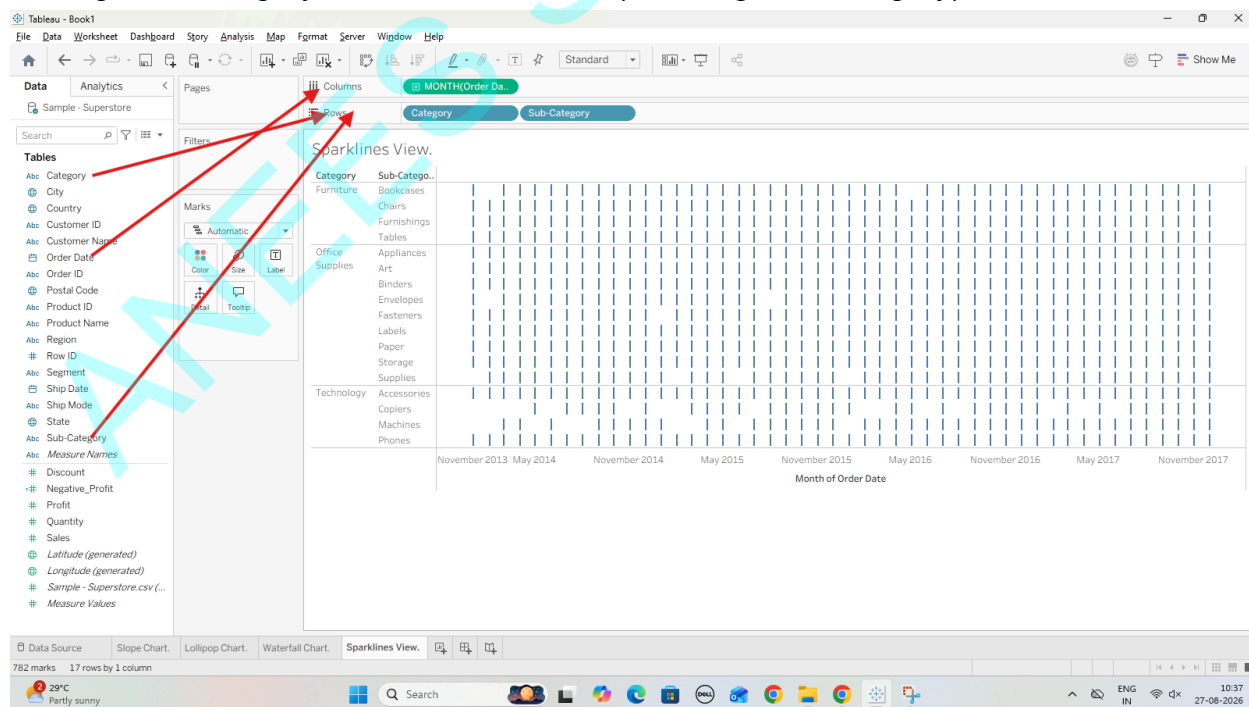

SUBJECT:- TABLEAU

C: Build Sparklines for Trend Analysis

Step 1: Set Up the Base Worksheet and Table Dimensions

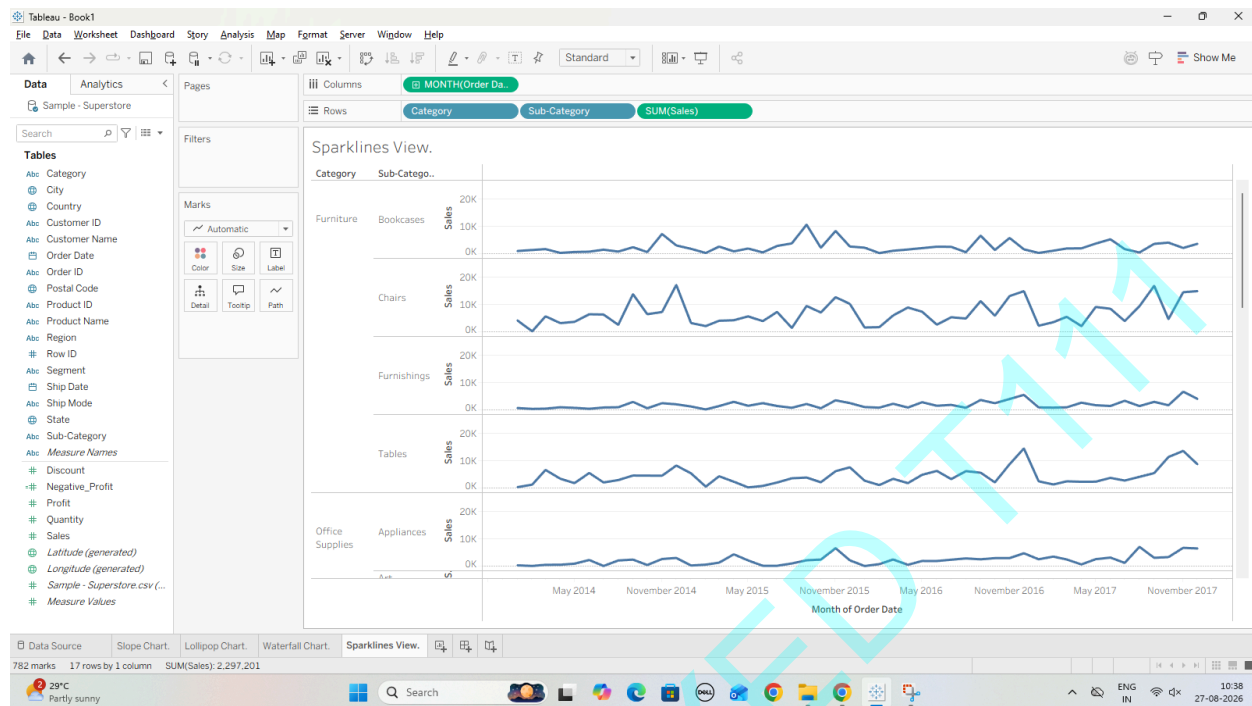

1. In Tableau Desktop, create a new worksheet and rename it: Sparklines View.
2. Drag Category onto the Rows shelf.
3. Drag Sub-Category onto the Rows shelf (to the right of Category).

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

3. Drag Sales onto the Rows shelf (appears as SUM(Sales)).

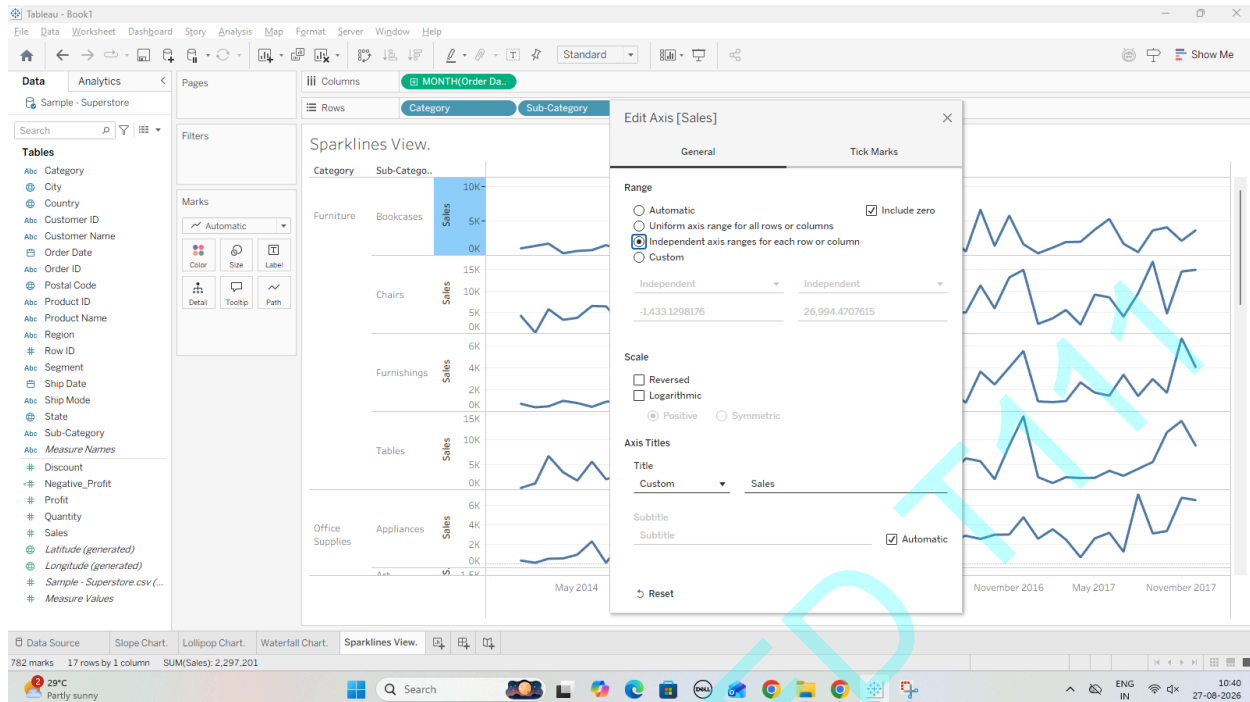

Step 3: Add Total Sales Metric Pill alongside the Sparkline

1. Drag Sales onto the Rows shelf again (to the left of SUM(Sales)) or on Columns to create a side-by-side KPI cell).
 - o Alternative Clean Method: Drag Sales onto the Tooltip / Label or create a discrete total pill.
2. To create the classic tabular layout:
 - o Leave MONTH(Order Date) on Columns.
 - o Right-click the vertical Y-axis on any sparkline row --> select Edit Axis....

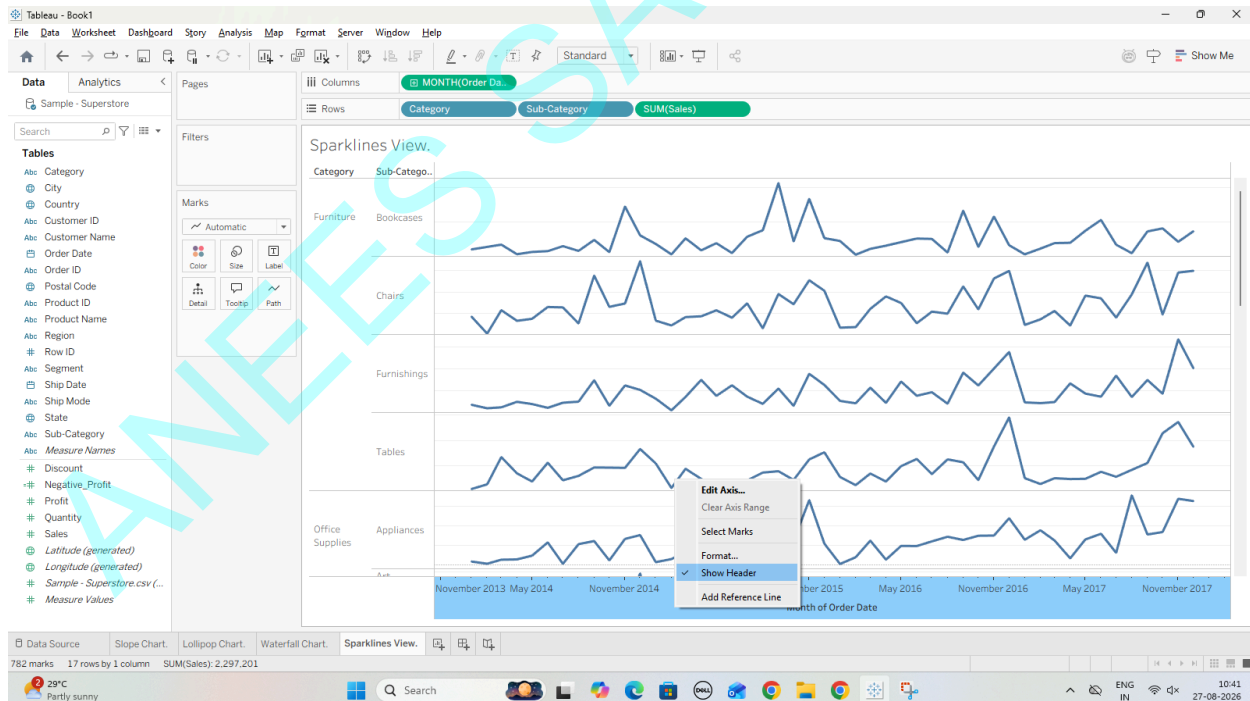

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Step 4: Strip Away Visual Clutter (Clean Sparkline Design)

1. Hide Axes: o Right-click the vertical Y-axis (Sales) --> uncheck Show Header. Right-click the bottom horizontal X-axis (Order Date) --> uncheck Show Header.

2. Remove Gridlines & Dividers: o Right-click anywhere in the chart canvas --> select Format....

In the Format pane on the left, click the Lines icon (paintbrush with lines):

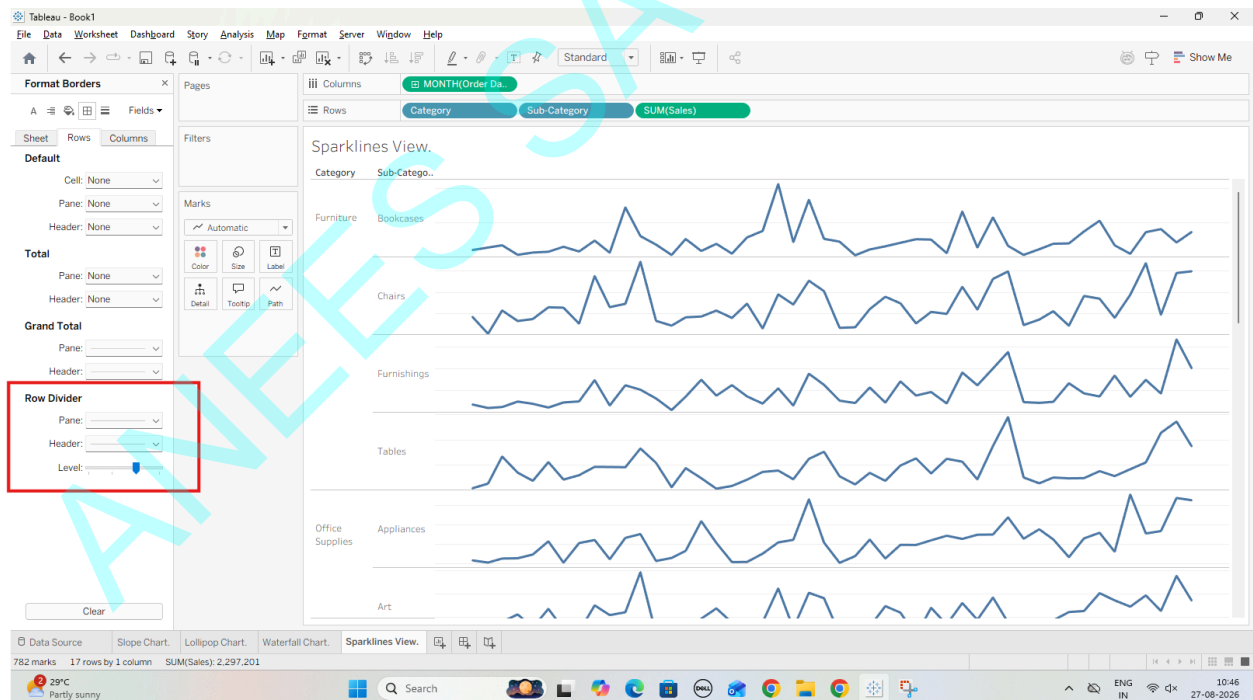

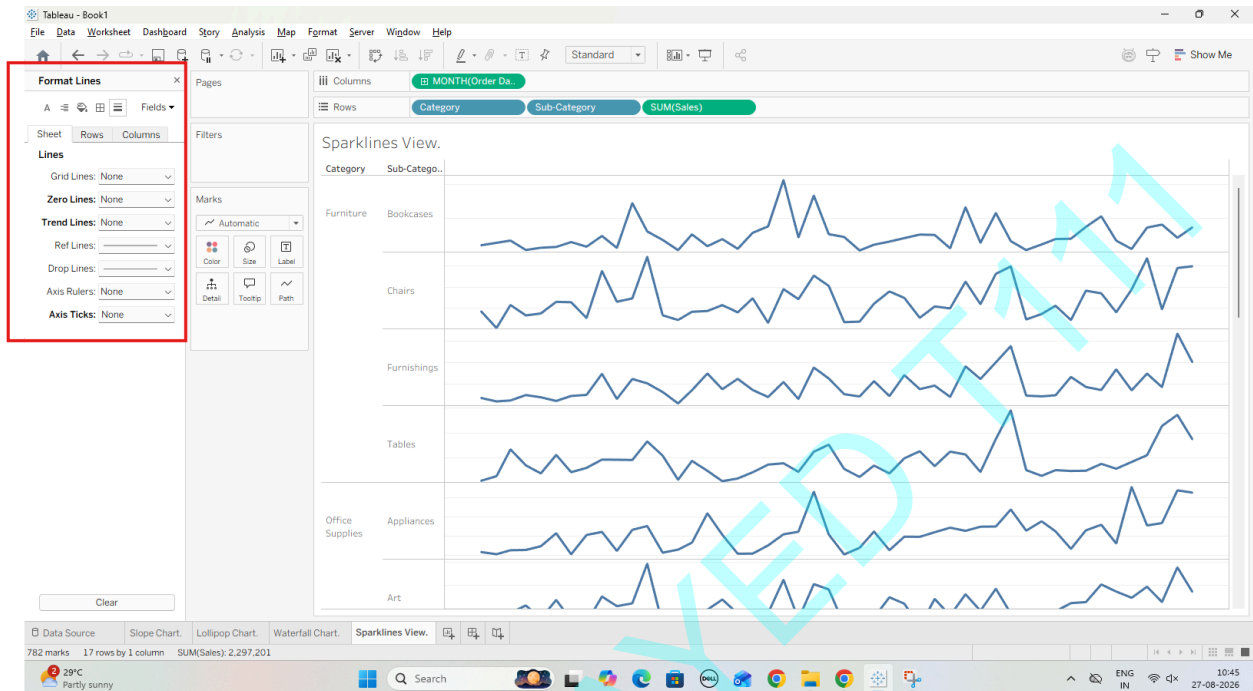

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Set Grid Lines to None.

Set Zero Lines to None.

Set Trend Lines and Drop Lines to None.

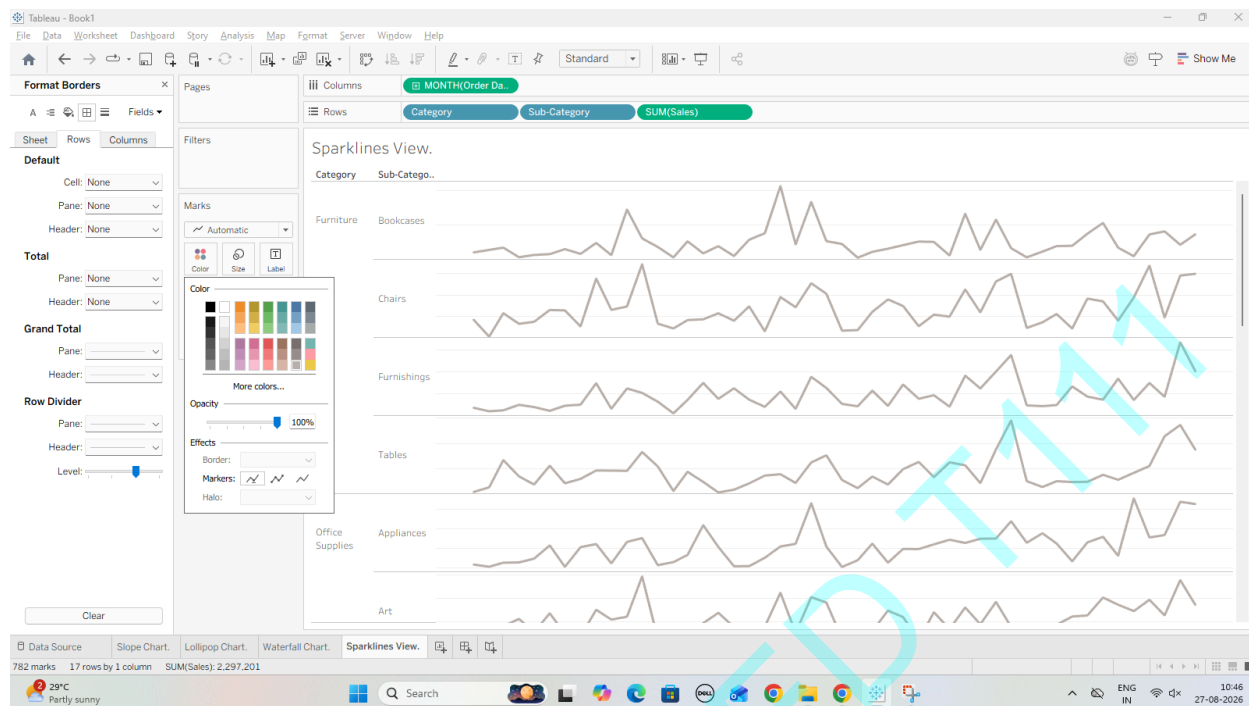

Step 5: Highlight Minimum and Maximum Milestone Endpoints

1. On the Marks card, click the Color tile --> set the line color to dark slate gray or deep navy.

SHETH MVLU COLLEGE

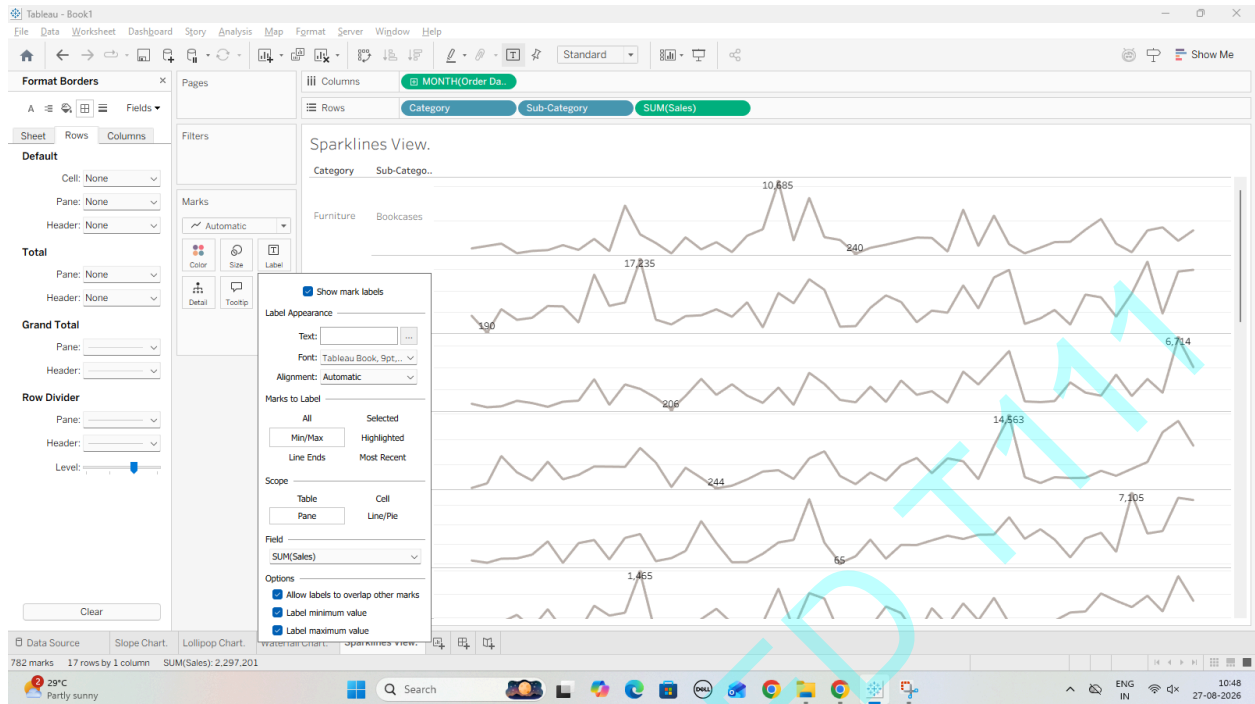

SUBJECT:- TABLEAU

2. On the Marks card, click the Label tile:
 - o Check Show mark labels.
 - o Under Marks to Label, select Min / Max.
 - o Under Field, ensure SUM(Sales) is selected.
 - o Under Options, check Label minimum value and Label maximum value.

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

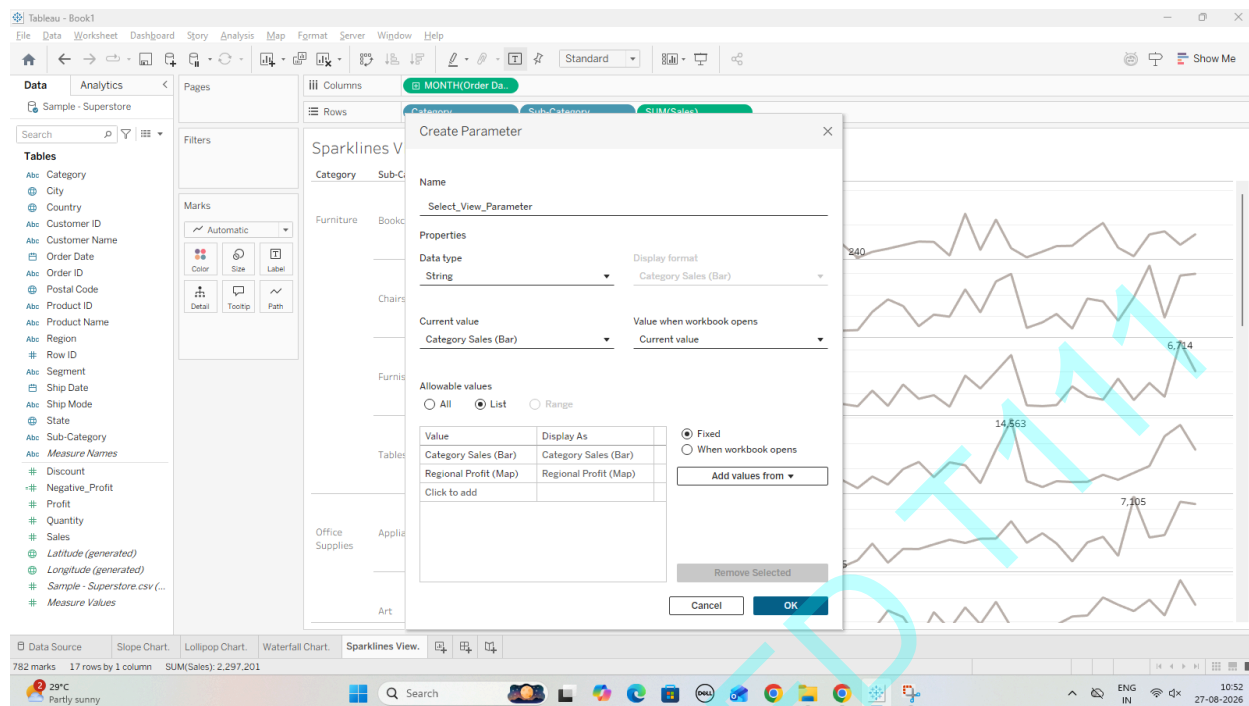

D: Implement Sheet Swapping for Dynamic Dashboards

Step 1: Create the Control Parameter

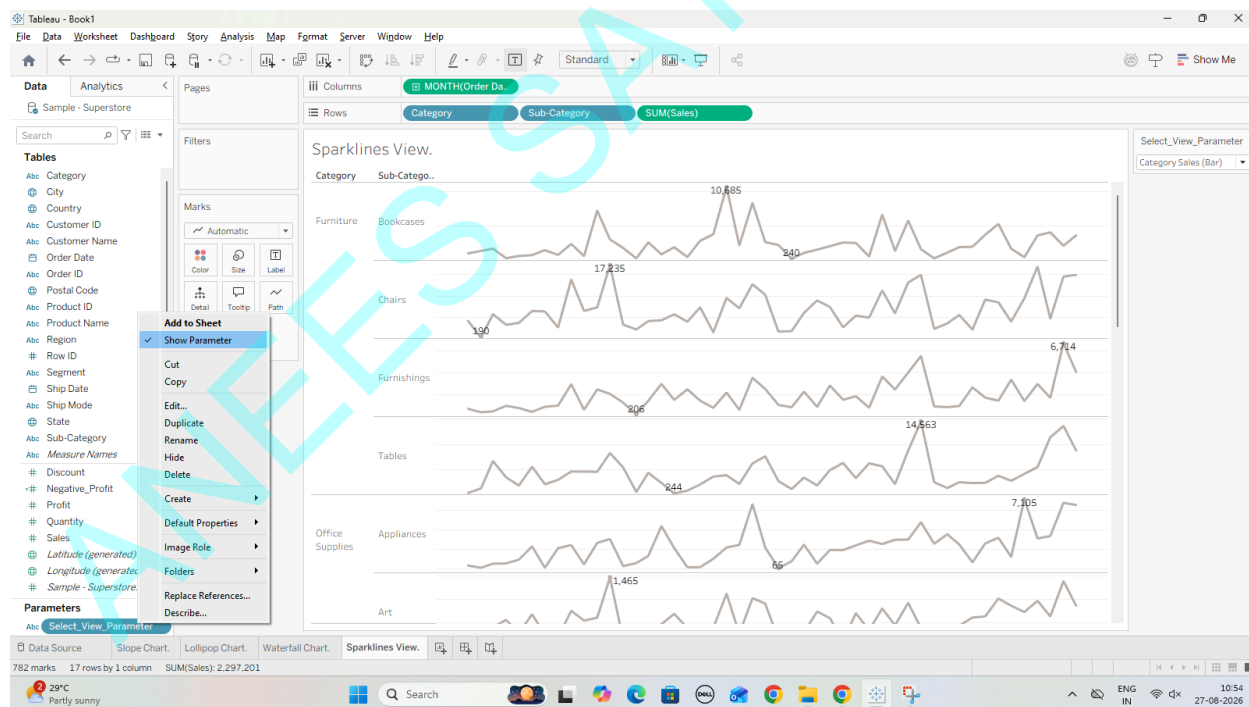

1. In the Data Pane on the left, click the small dropdown arrow next to the search bar (or right-click an empty area) --> select Create Parameter....
2. Configure the parameter properties:
 - o Name: Select_View_Parameter
 - o Data type: String
 - o Allowable values: Choose List
 - o In the List of values table, type the two view names:
 1. Category Sales (Bar)
 2. Regional Profit (Map)
 - o Current value: Set to Category Sales (Bar)
3. Click OK.

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

4. In the Data Pane under Parameters, right-click **Select_View_Parameter** --> select **Show Parameter**.

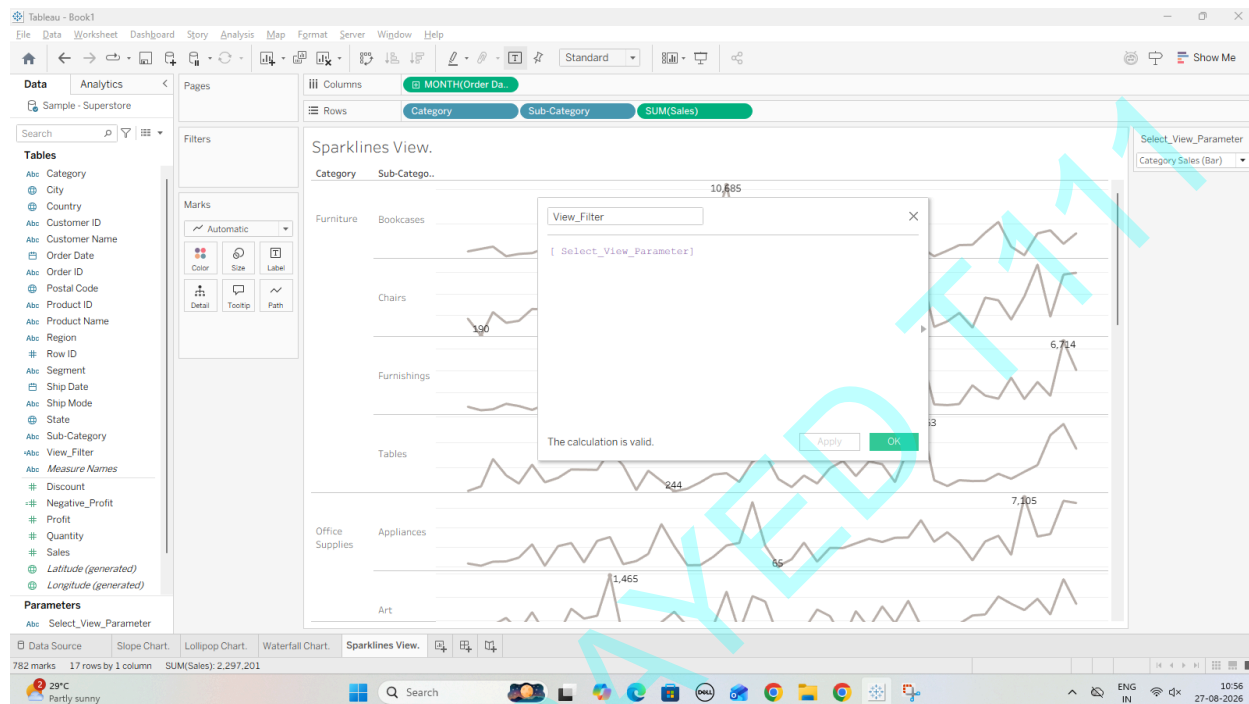

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Step 2: Create the Dynamic Filter Field

1. Right-click an empty space in the Data Pane --> select Create Calculated Field.... 2. Configure the field: o Field Name: View_Filter o Tableau Formula: Code snippet [Select_View_Parameter]

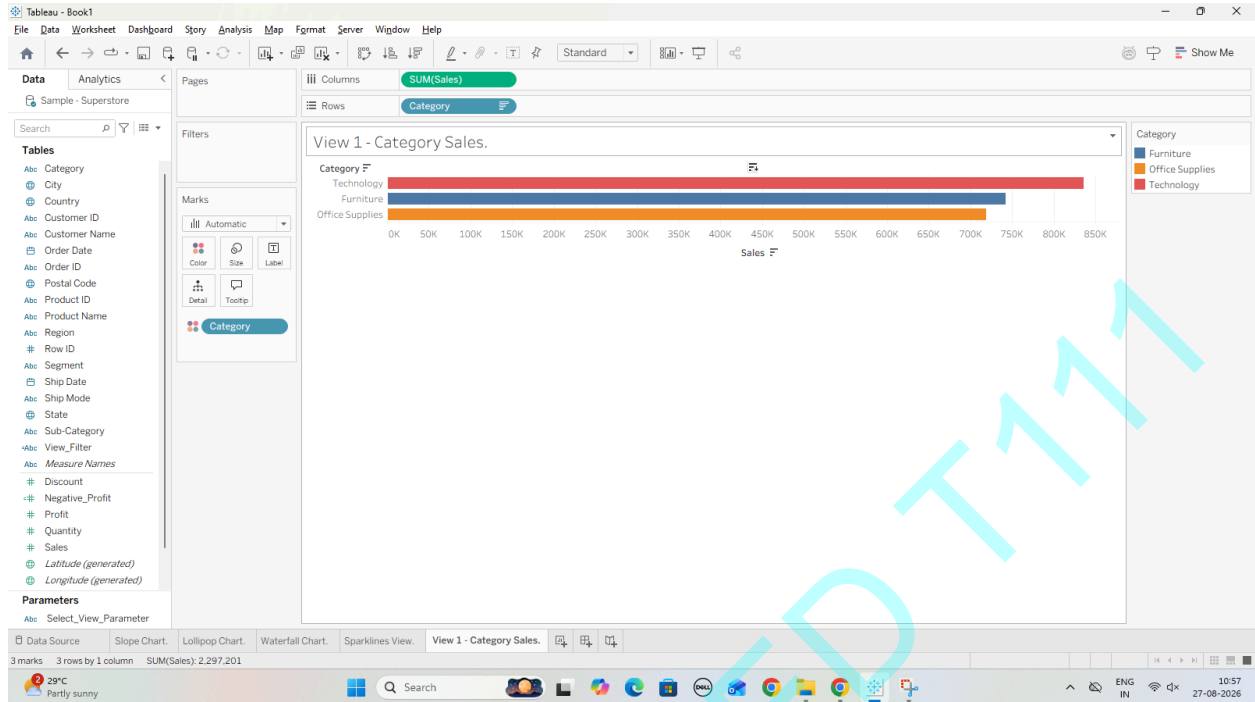

Step 3: Build Sheet 1 (View 1 - Category Sales)

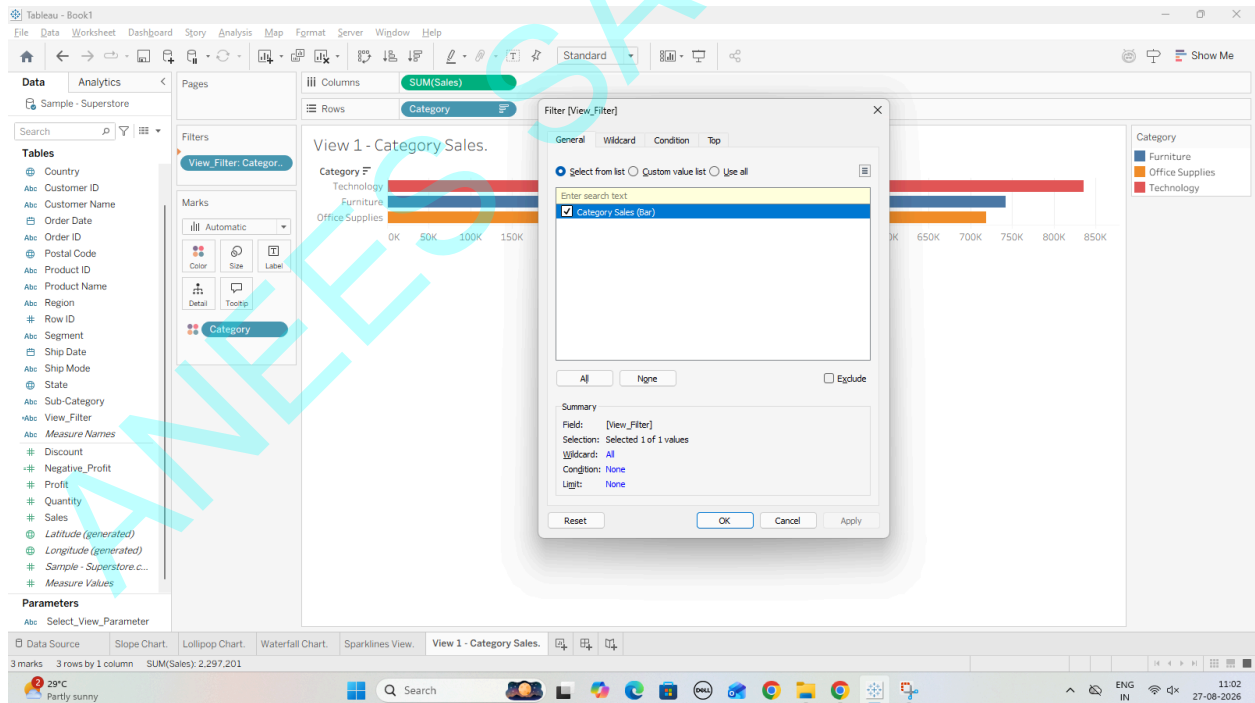

1. Create a new worksheet and name it: View 1 - Category Sales.
2. Build the chart:
 - o Drag Category to the Rows shelf.
 - o Drag Sales to the Columns shelf.
 - o Drag Category to Color on the Marks card.
 - o Sort bars descending.

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

3. Apply the dynamic filter: o Ensure your parameter is set to Category Sales (Bar). o Drag the calculated field View_Filter to the Filters shelf. o Select Custom value list (or use the list) --> type or check Category Sales (Bar) --> click OK

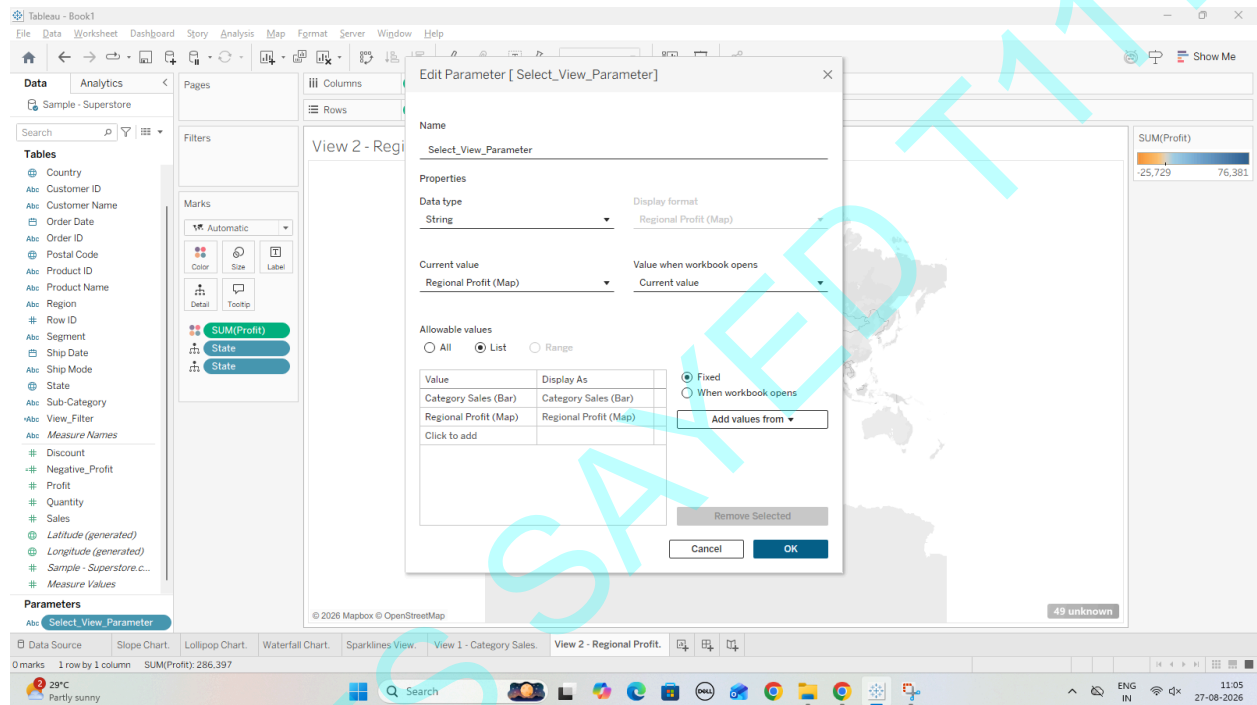

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Step 4: Build Sheet 2 (View 2 - Regional Profit)

1. Create another new worksheet and name it: View 2 - Regional Profit.
2. Build the chart:
 - o Drag State to the canvas (or double-click to generate latitude/longitude map marks).
 - o Drag Profit to the Color tile on the Marks card.
 - o (Alternative bar view if offline: Drag Region to Rows, Profit to Columns).
3. Switch the Parameter to View 2:
 - o In the parameter control, switch the selection to Regional Profit (Map).

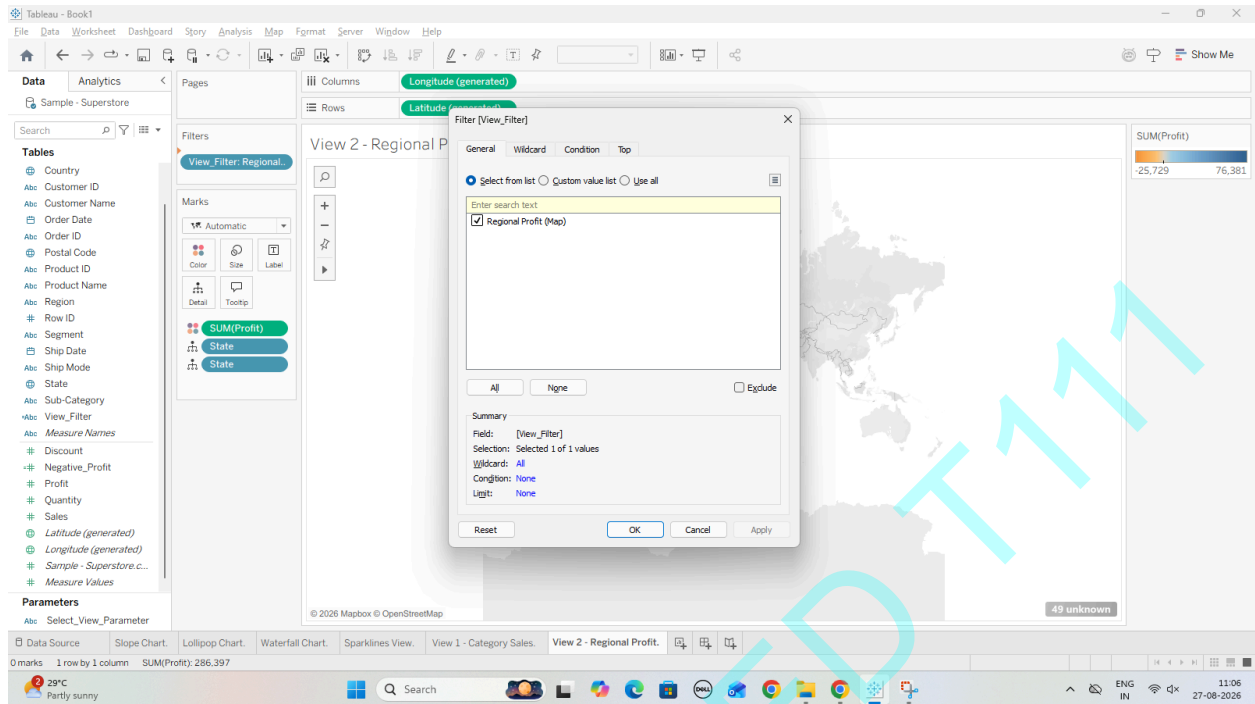

4. Apply the dynamic filter:

Drag View_Filter to the Filters shelf.

Check or type Regional Profit (Map) --> click OK.

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

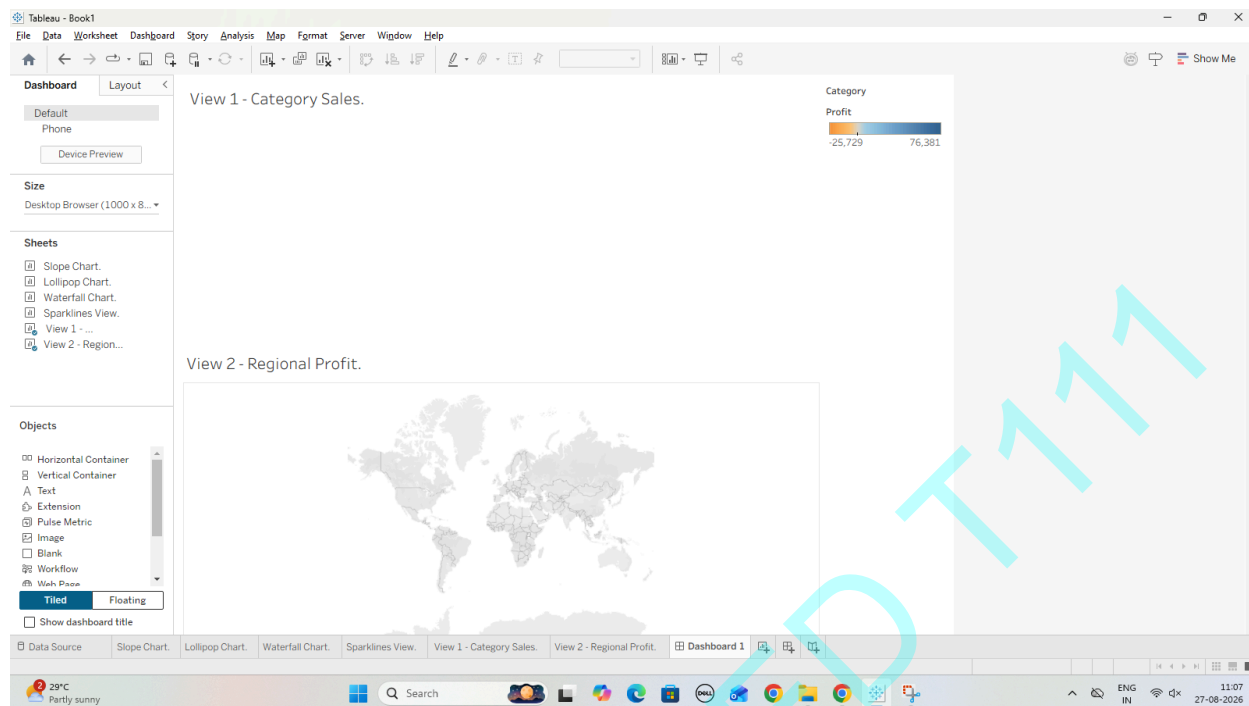

Step 5: Construct the Dynamic Swapping Dashboard

1. Create a new Dashboard (click the New Dashboard icon at the bottom tab bar).
2. Under the Objects pane on the bottom-left:
 - o Click and drag a Vertical Layout Container (or Horizontal) onto the blank dashboard canvas.
3. Drag View 1 - Category Sales into the layout container.
4. Drag View 2 - Regional Profit into the same layout container directly below or above the first sheet.

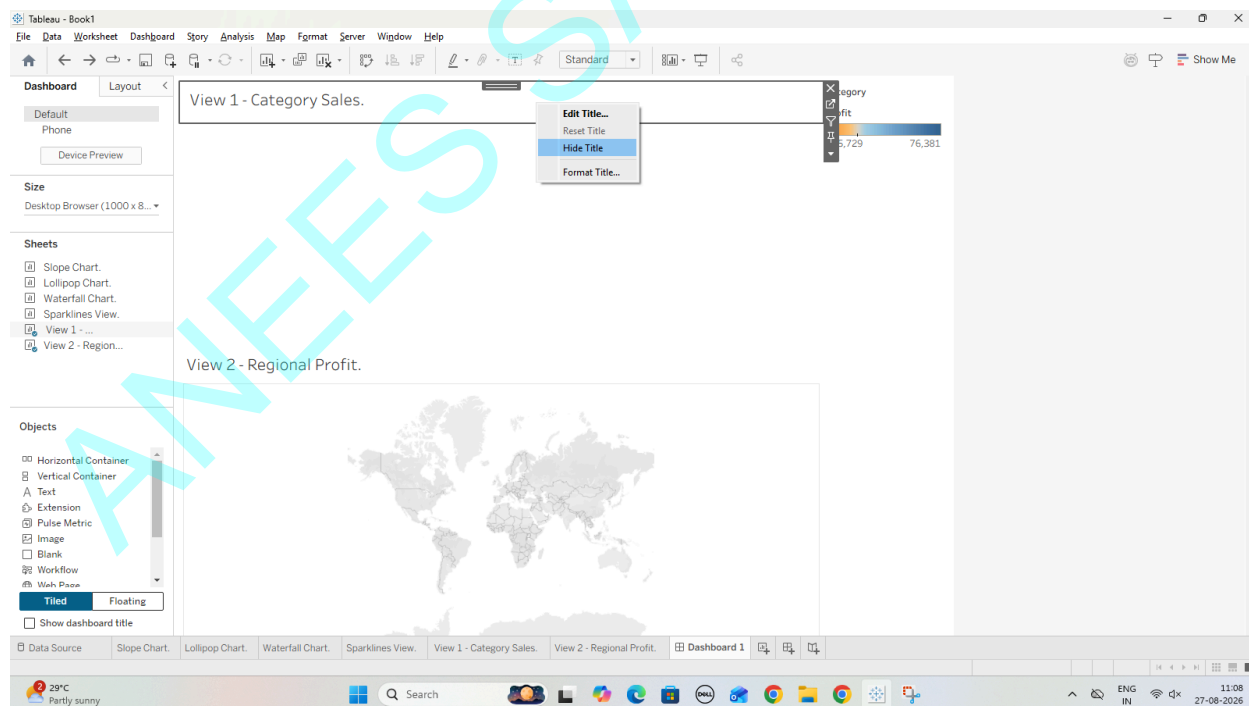

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

5. Critical Step for Sheet Swapping (Hide Titles):

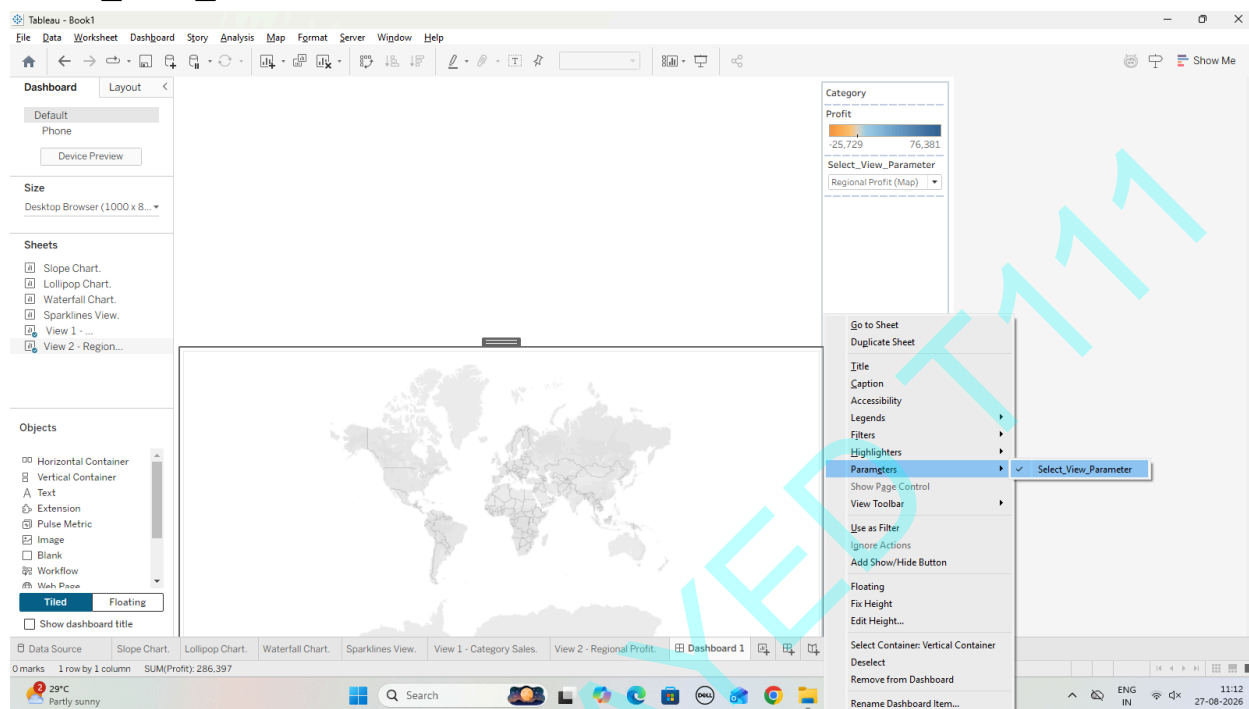

- o Right-click the title bar of View 1 - Category Sales on the dashboard --> select Hide Title.
- o Right-click the title bar of View 2 - Regional Profit on the dashboard --> select Hide Title.

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

6. Add the Parameter selector: o Click on the visible sheet --> click the small dropdown arrow on its container border --> Parameters --> Select_View_Parameter.

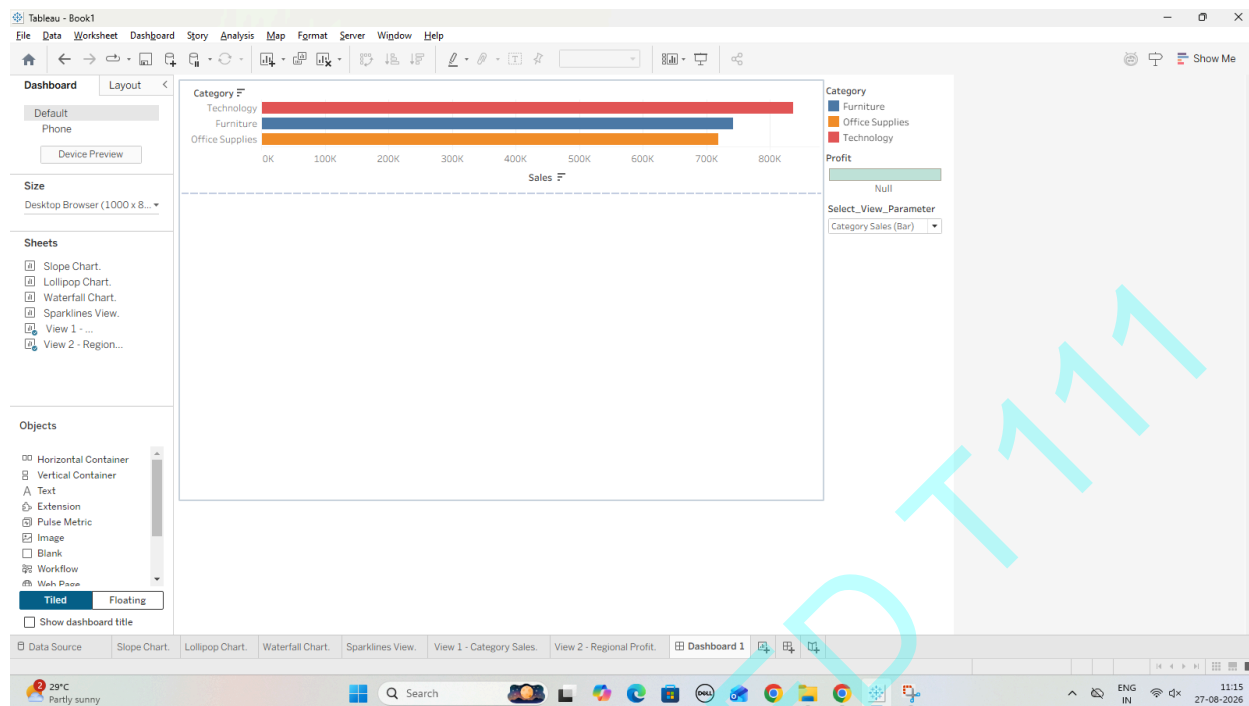

Step 6: Test the Dynamic Swapping

In the parameter dropdown control:

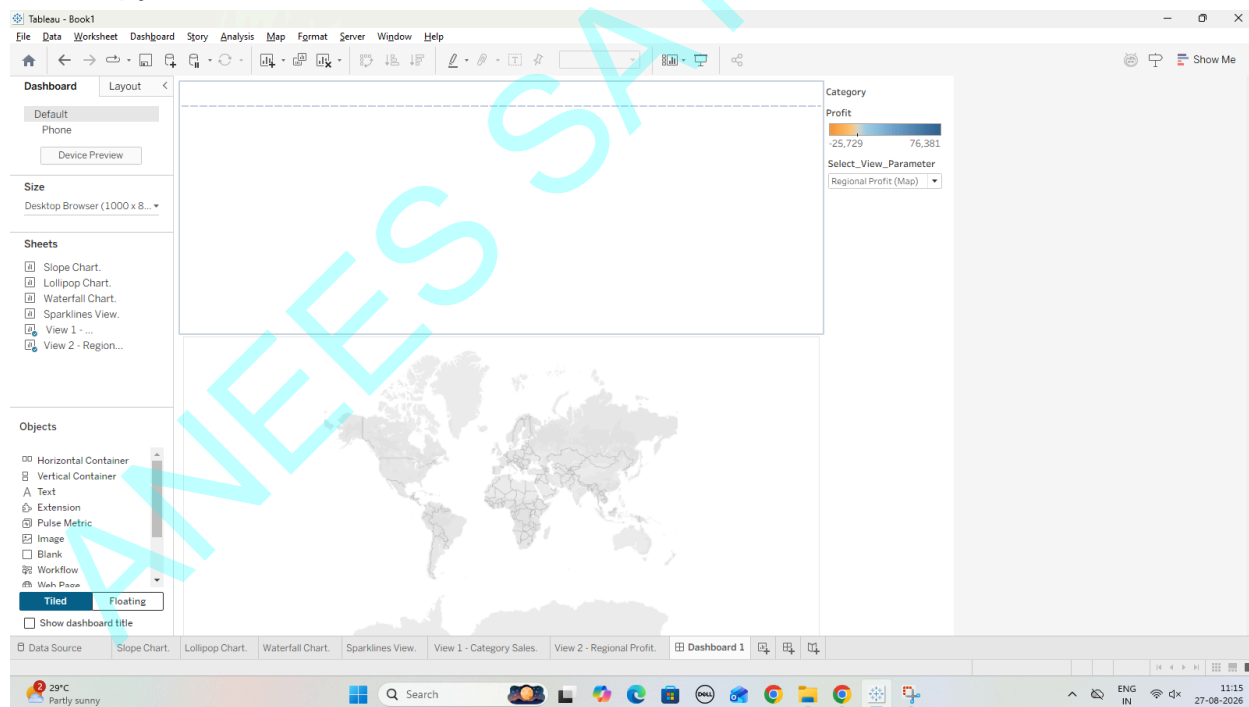

o Select Category Sales (Bar): Sheet 1 expands to fill 100% of the container, while Sheet 2 collapses entirely to 0 height.

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Select Regional Profit (Map): Sheet 1 collapses completely, and Sheet 2 expands to occupy the container.

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

E: Create Custom Geographic Territories

Step 1: Create a Custom State Grouping (Territories)

1. In Tableau Desktop, navigate to a new worksheet and rename it: Custom Territories Map.
2. In the Data Pane on the left, locate the State field.
3. Right-click State --> select Create --> Group....
4. In the grouping dialogue box: o Select states belonging to your custom zones and click Group:

Group 1 (Pacific & Mountain Zone): Select California, Washington, Oregon, Nevada, Arizona, Utah, Idaho, Montana, Wyoming, Colorado, New Mexico --> Click Group --> Rename group to: Pacific & Mountain Zone.

Group 2 (Midwest & Central Hub): Select Texas, Illinois, Wisconsin, Nebraska, Michigan, Ohio, Indiana, Minnesota, Iowa, Missouri, Kansas, Oklahoma, North Dakota, South Dakota -->

Click Group --> Rename group to: Midwest & Central Hub.

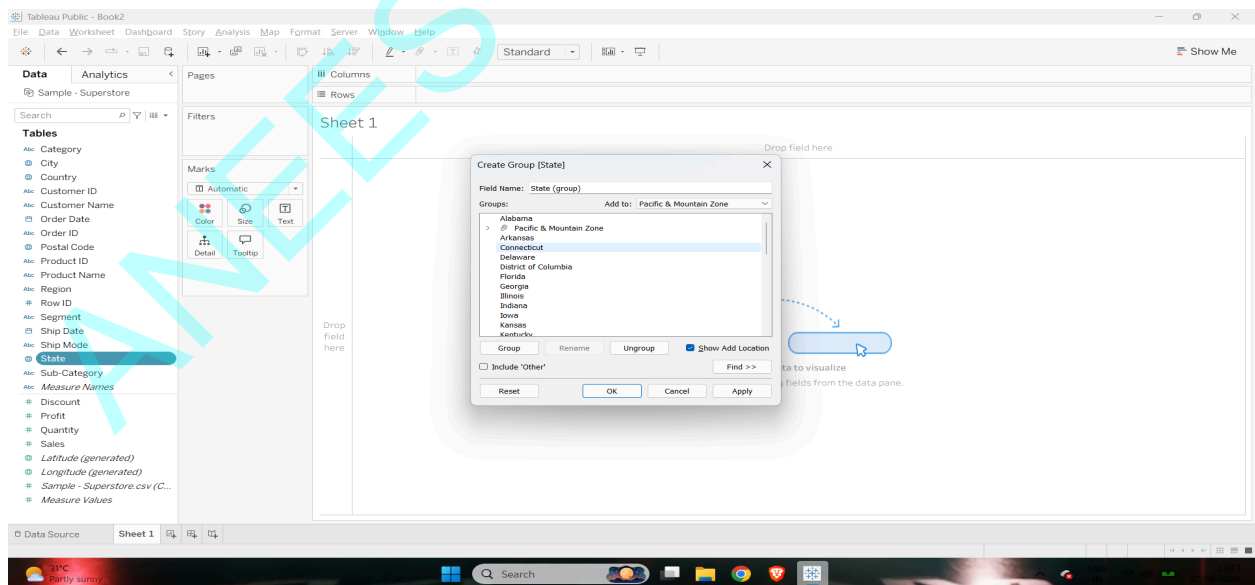

Group 3 (Atlantic & North-East): Select New York, Pennsylvania, Massachusetts, New Jersey, Delaware, Maryland, Connecticut, Rhode Island, Vermont, New Hampshire, Maine --> Click Group -->

Rename group to: Atlantic & North-East.

Group 4 (Southern Enterprise Territory): Check the box Include 'Other' (or group remaining southern states: Florida, Georgia, North Carolina, Virginia, Tennessee, Kentucky, Alabama, Mississippi, Arkansas, Louisiana, South Carolina)

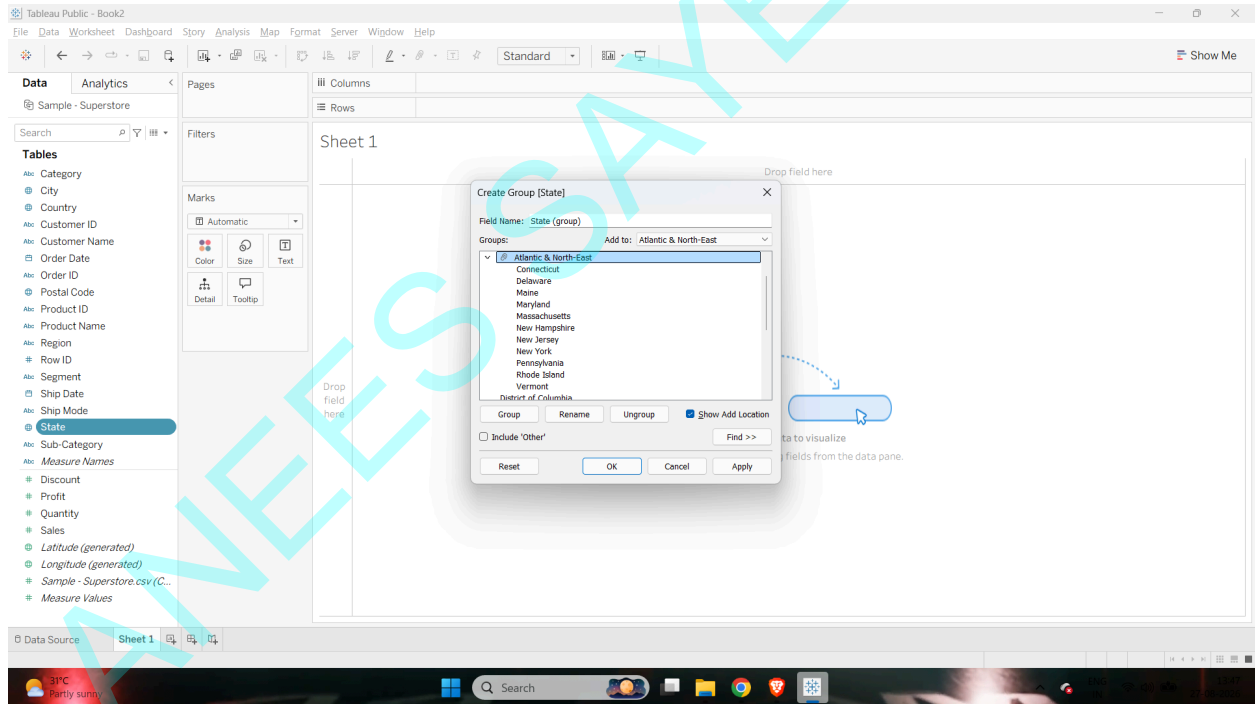

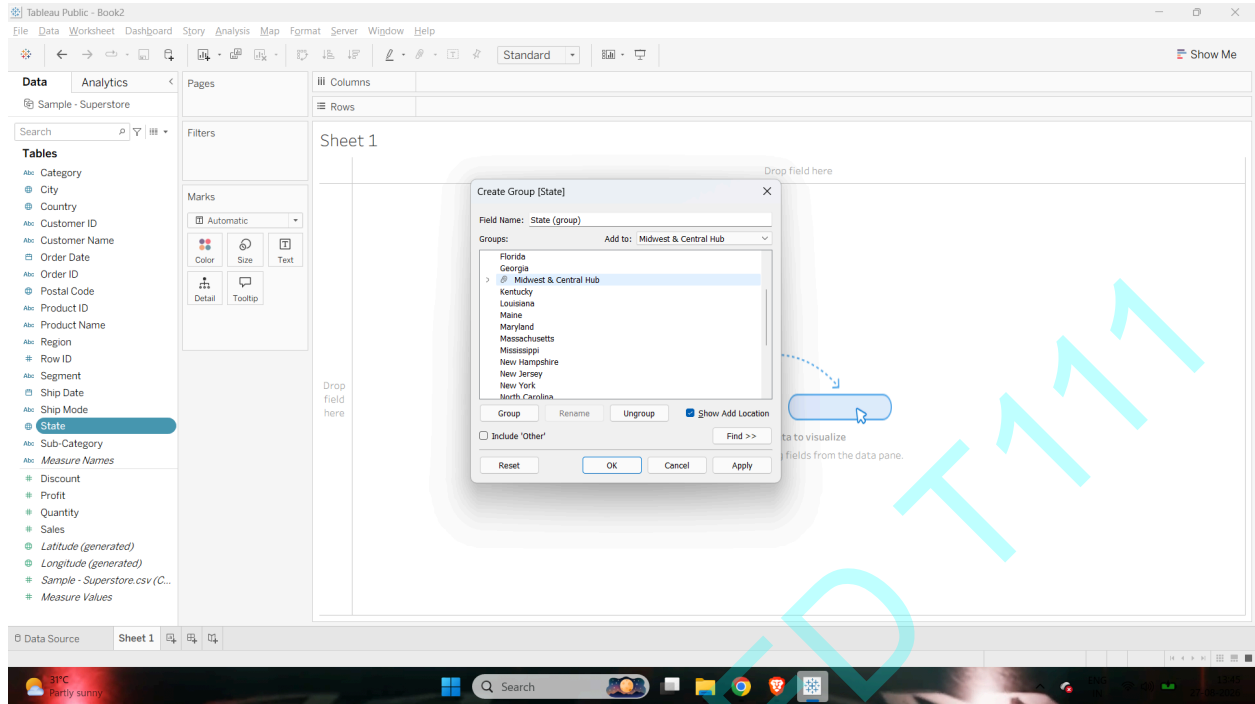

--> Rename to: Southern Enterprise Territory.

Change the Field Name at the top to: Sales_Territories.

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

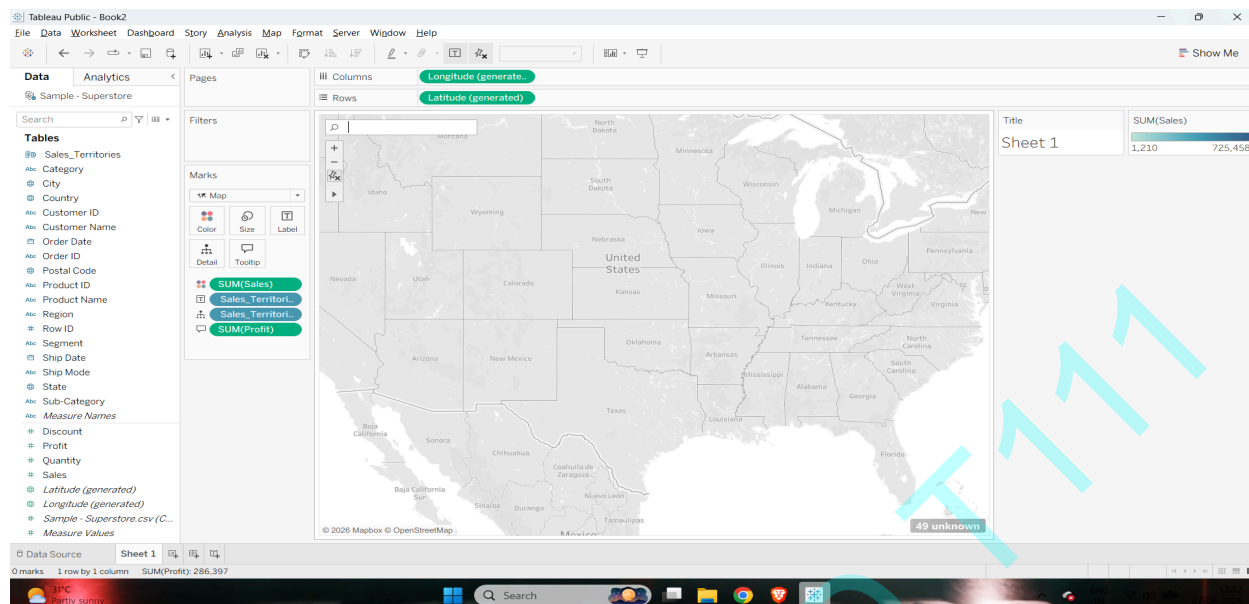

The screenshot shows the 'Create Group' dialog box in Tableau. The dialog is titled 'Create Group [State]'. It has a 'Field Name' field set to 'Sales_Territories'. Below it, there's a 'Groups' list with the following items: 'Southern Enterprise Territory', 'Pacific & Mountain Zone', 'Atlantic & North-East District of Columbia', and 'Midwest & Central Hub West Virginia Wisconsin'. To the right of the list is an 'Add to' dropdown menu set to 'Southern Enterprise Territory'. At the bottom of the dialog, there are buttons for 'Group', 'Rename', 'Ungroup', 'Show Add Location', 'Include Other' (unchecked), 'Field >>', 'Reset', 'OK', 'Cancel', and 'Apply'. The background shows the Tableau interface with 'State' selected in the Dimensions shelf.

1. Double-click Sales_Territories in the Data Pane (or drag Latitude (generated) to Rows and Longitude (generated) to Columns, and drag Sales_Territories onto the Detail tile).
2. On the Marks card, change the mark type dropdown from Automatic to Map.
3. Observe the Spatial Fusion: o Tableau merges the internal borders of individual states, rendering 4 cohesive, contiguous regional polygon territories.
4. Drag Sales onto the Color tile on the Marks card.
5. Drag Profit onto the Tooltip tile.
6. Drag Sales_Territories onto the Label tile to display each territory's name centered within its consolidated spatial boundary.

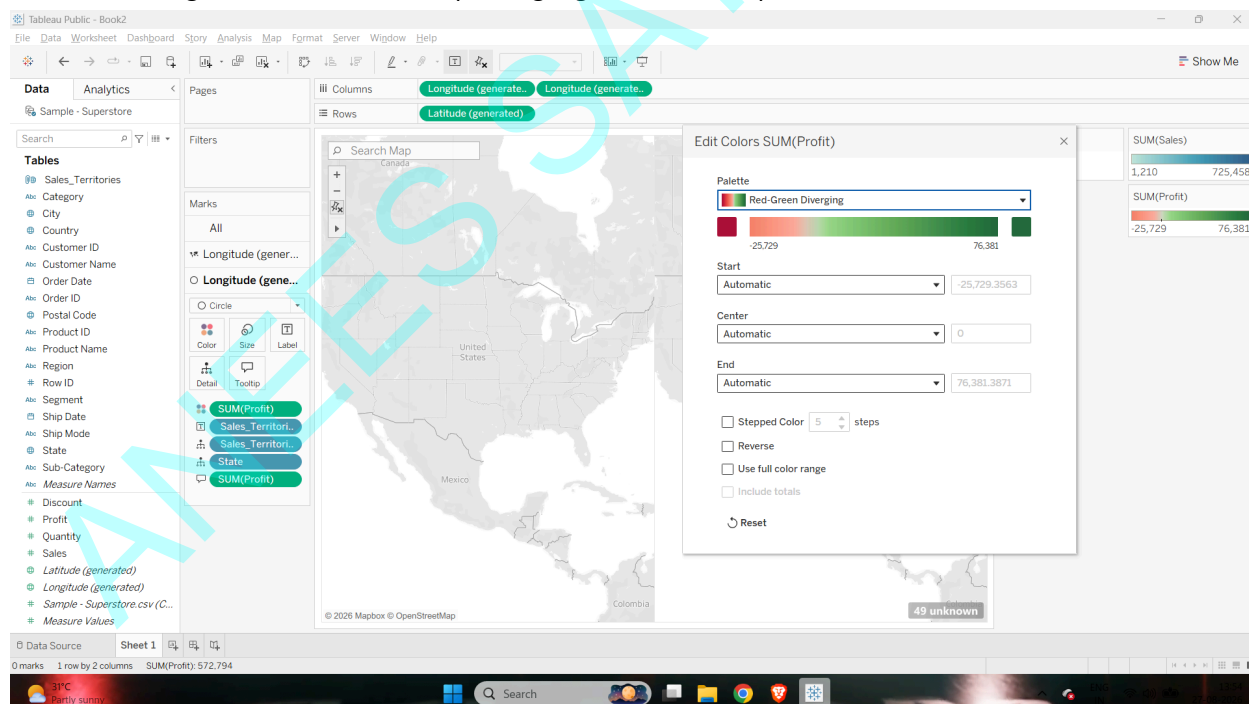

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Step 4: Compare State Granularity vs. Custom Territory

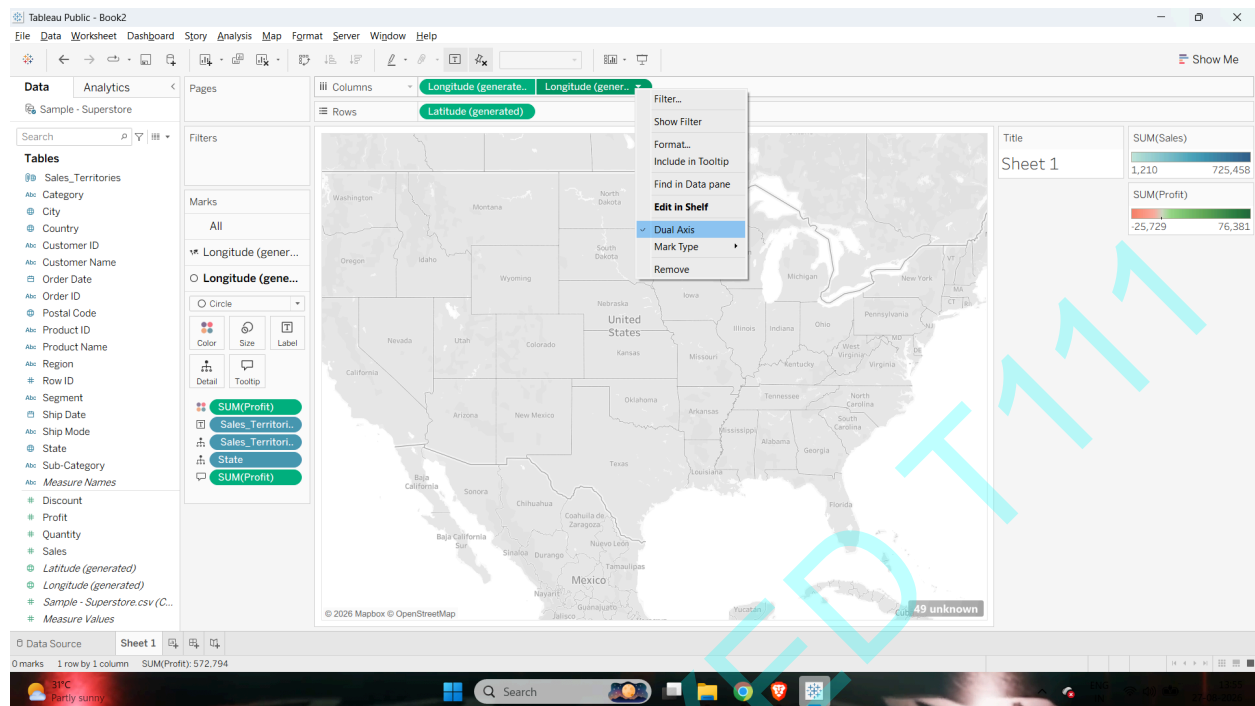

1. Hold Ctrl (or Cmd on Mac) and drag Longitude (generated) on the Columns shelf to create a second copy next to itself (Dual Axis Map).
2. On the second map Marks card:
 - o Drag State onto Detail.
 - o Change mark type to Circle.
 - o Drag Profit onto Color (diverging Red-Green).

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

3. Right-click the second Longitude (generated) pill on Columns --> select Dual Axis.

F: Use Background Images in Dashboards

Step 1: Create the Coordinate Calculated Fields

1. In Tableau Desktop, create a new worksheet named: Store Floor Plan Heatmap.

2. Create the Store_X_Coordinate field:

o Right-click in the Data Pane -->

Create Calculated Field.... o Field Name:

Store_X_Coordinate

o Tableau Formula:

Code snippet

```
CASE [Sub-Category] WHEN "Phones" THEN 150 WHEN "Accessories" THEN 250
WHEN "Binders" THEN 150 WHEN "Chairs" THEN 500 WHEN "Tables" THEN 500
WHEN "Bookcases" THEN 380 WHEN "Storage" THEN "Appliances" THEN 680 WHEN
"Machines" THEN 850 WHEN "Copiers" THEN 850 ELSE 500 END
```

The screenshot shows the Tableau Desktop interface with the following components:

- Top Bar:** File, Data, Worksheet, Dashboard, Story, Analysis, Map, Format, Server, Window, Help.
- Left Panel:**
 - Data:** Sample - Superstore
 - Tables:** Sales_Territories, Category, City, Country, Customer ID, Customer Name, Order Date, Order ID, Postal Code, Product ID, Product Name, Region, Row ID, Segment, Ship Date, Ship Mode, State, Sub-Category, Measure Names.
 - Filters:** (Empty)
 - Marks:** Automatic, Color, Size, Text, Detail, Tooltip.
- Columns Shelf:** Store_X_Coordinate
- Rows Shelf:** (Empty)
- Visualization:** Store Floor Plan Heatmap. A dialog box is open with the following text:

```
CASE [Sub-Category]
  WHEN "Phones" THEN 150
  WHEN "Accessories" THEN 250
  WHEN "Binders" THEN 150
  WHEN "Chairs" THEN 500
  WHEN "Tables" THEN 500
  WHEN "Bookcases" THEN 380
  WHEN "Storage" THEN 800
  WHEN "Appliances" THEN 680
```

 The calculation is valid. The OK button is highlighted.
- Bottom Bar:** 0 Data Source, Custom Territories Map, Store Floor Plan Heatmap.

- o Right-click in the Data Pane --> Create Calculated Field....

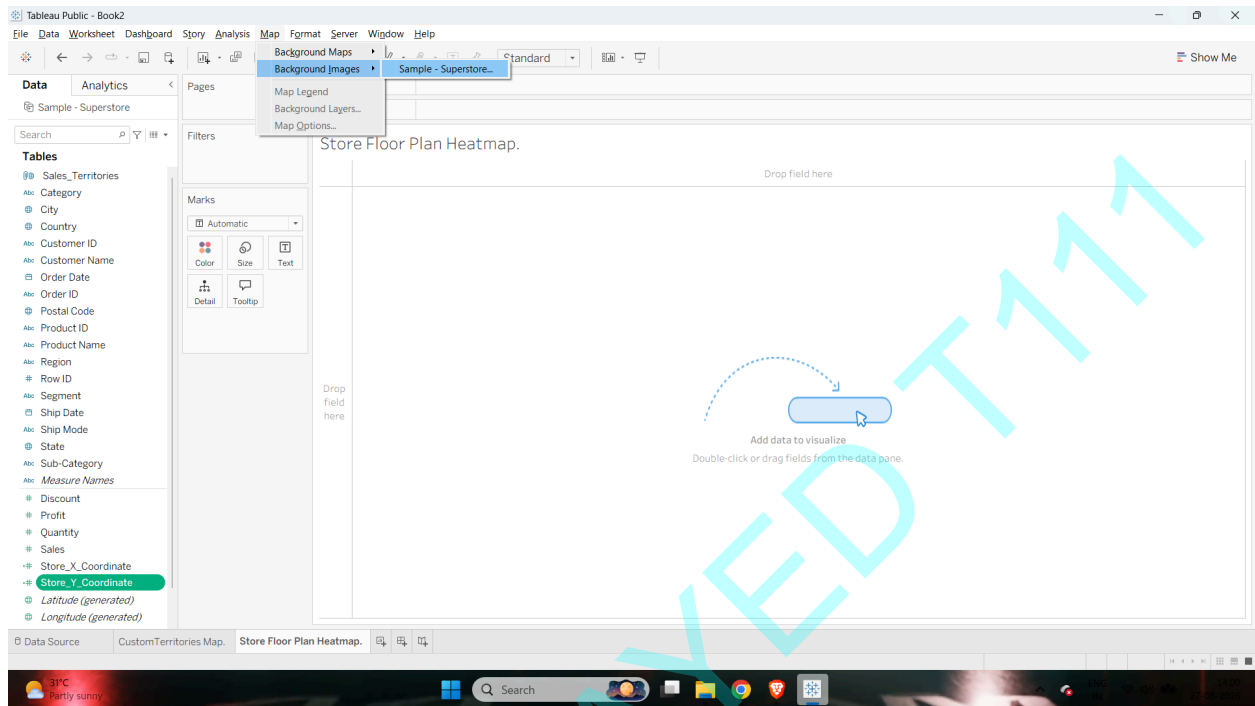

o Tableau Formula: Code snippet CASE [Sub-Category] WHEN "Phones" THEN 480

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Step 2: Configure the Custom Background Image in Tableau

1. Go to the top application menu: select Map --> Background Images --> select Superstore (your data source).

2. In the Background Images dialog, click Add Image....

3. In the Add Background Image window:

- o Name: Retail Floor Plan

- o File or URL: Click Browse and select any image file of a floor plan / blueprint on your machine (or use a placeholder rectangle/grid image).

- o X Field (Horizontal axis): Field: Select Store_X_Coordinate Left: 0 Right: 1000

- o Y Field (Vertical axis): Field: Select Store_Y_Coordinate Bottom: 0 Top: 600

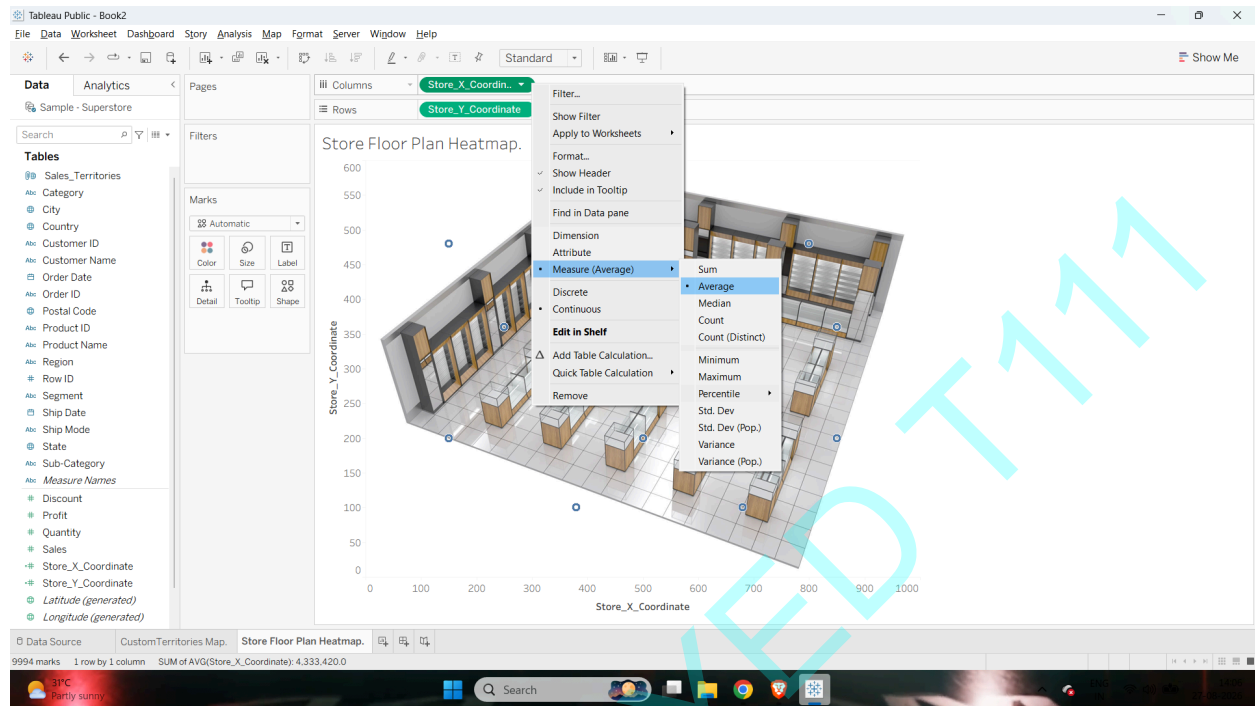

- ### Step 3: Build the Floor Plan Spatial Visualization

- The screenshot shows the Tableau Desktop interface with a 3D floor plan heatmap. The main view is titled "Store Floor Plan Heatmap." and displays a 3D perspective of a store layout with various counters and shelving units. The axes are labeled "Store_X_Coordinate" (horizontal, ranging from 0 to 1000) and "Store_Y_Coordinate" (vertical, ranging from 0 to 600). The heatmap is overlaid on the floor plan, showing a grid of data points. The interface includes a sidebar with "Data" and "Analytics" tabs, a "Columns" shelf with "Store_X_Coordinate", and a "Rows" shelf with "Store_Y_Coordinate". The "Marks" shelf is set to "Automatic". The bottom status bar indicates "9994 marks" and "1 row by 1 column".

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

4. Ensure both coordinate pills are aggregated or treated properly: o Right-click SUM(Store_X_Coordinate) on Columns --> select Dimension(or keep as AVG).

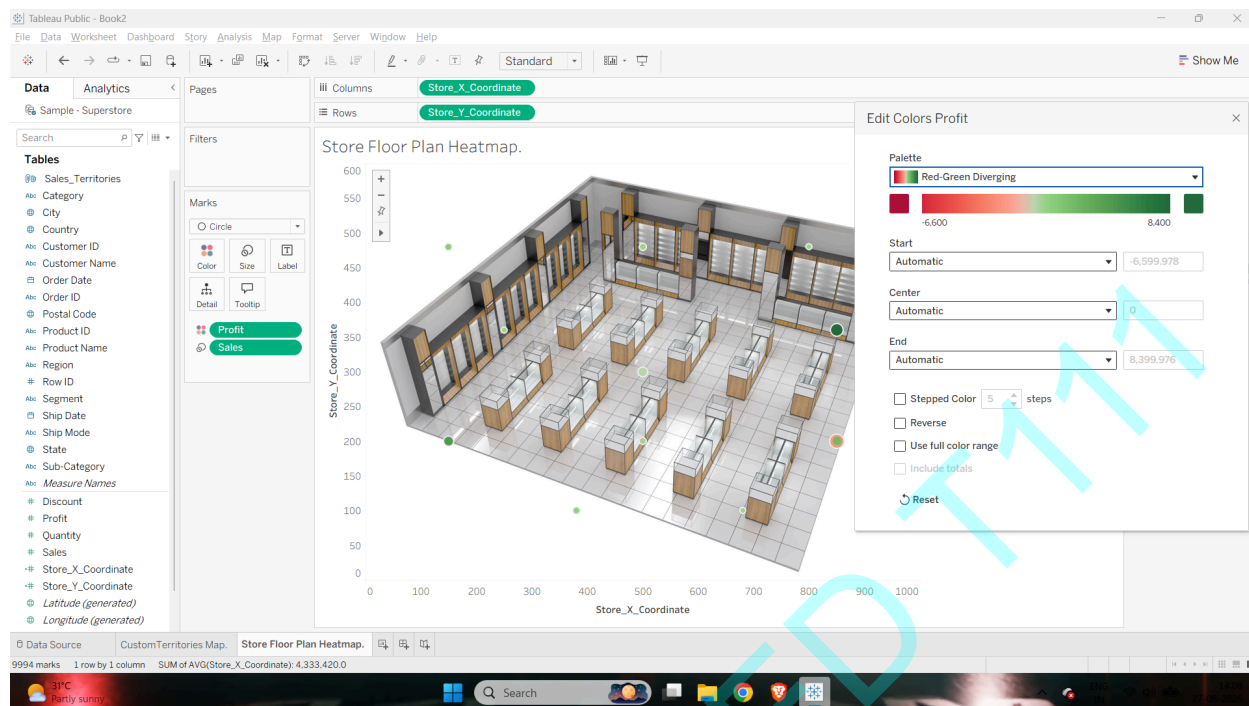

Step 4: Encode Metrics onto the Spatial Zones

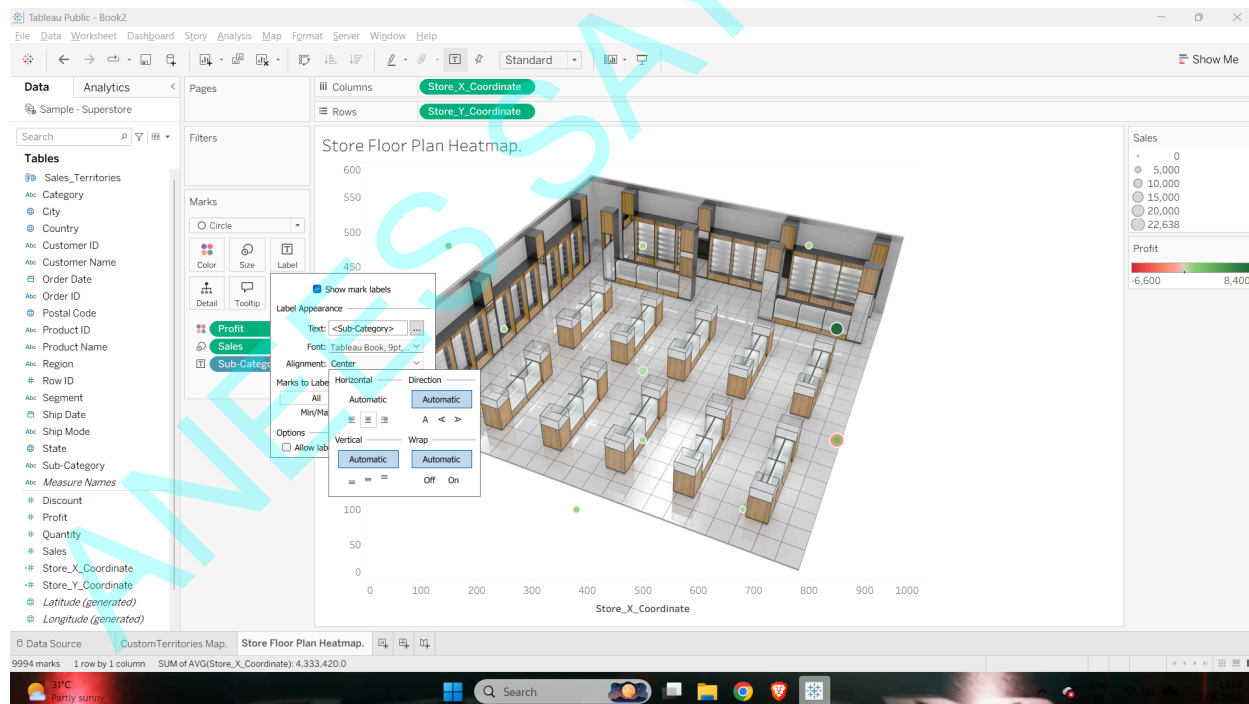

1. On the Marks card, change mark type from Automatic to Circle (or Shape).
2. Drag Sales onto the Size tile (so higher sales departments appear as larger footprint zones).
3. Drag Profit onto the Color tile: o Set color palette to Red-Green Diverging (Center = 0).

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

4. Drag Sub-Category onto the Label tile --> check Show mark labels --> set alignment to Bottom Center.

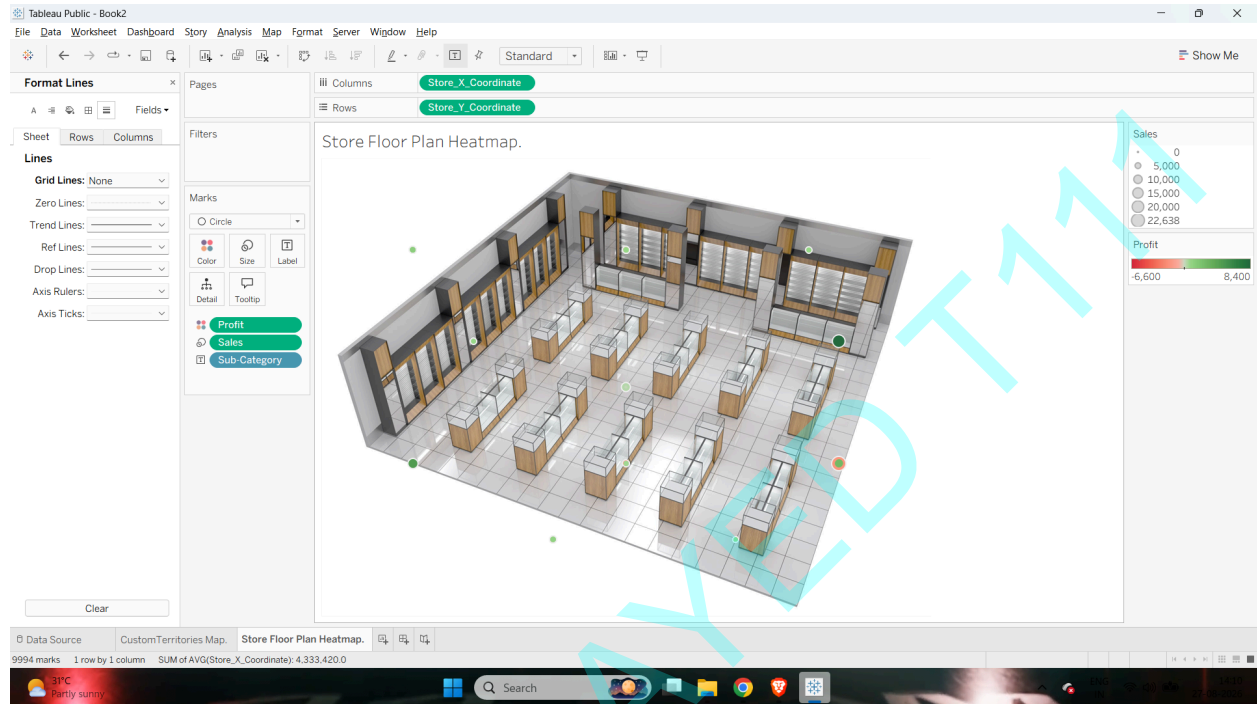

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

5. Clean the Canvas:

- o Right-click the X-axis (Store_X_Coordinate) --> uncheck Show Header.
- o Right-click the Y-axis (Store_Y_Coordinate) --> uncheck Show Header.
- o Format grid lines to None.

G: Apply Animation and Transparency Techniques

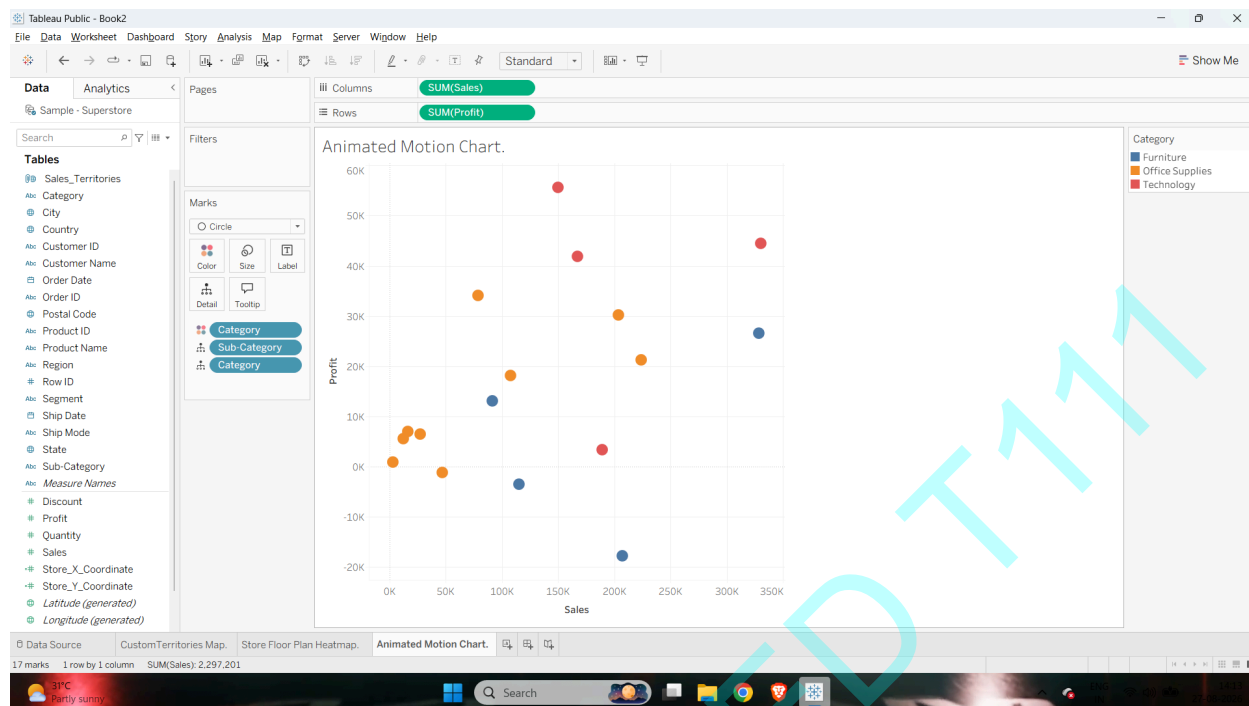

Task 1: Create an Animated Motion Chart (Pages Shelf)

Step 1: Set Up the Scatter Plot Worksheet

1. In Tableau Desktop, create a new worksheet named: Animated Motion Chart.
2. Drag Sales onto the Columns shelf (SUM(Sales)).
3. Drag Profit onto the Rows shelf (SUM(Profit)).
4. Drag Sub-Category onto the Detail tile and Color tile on the Marks card.
5. Drag Category onto the Shape tile (optional, for visual distinction).
6. Change mark type to Circle and adjust the Size slider slightly upward for visibility.

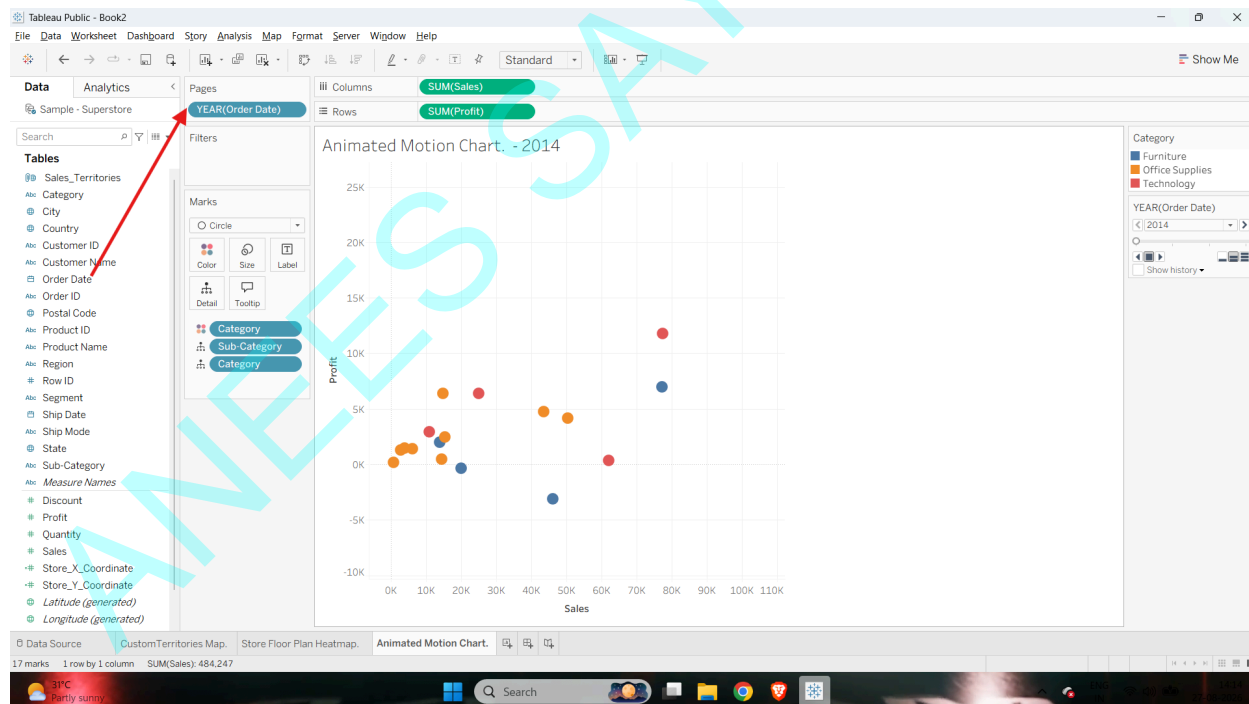

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

Step 2: Add Time to the Pages Shelf

1. Drag Order Date onto the Pages shelf (located directly above the Filters shelf).

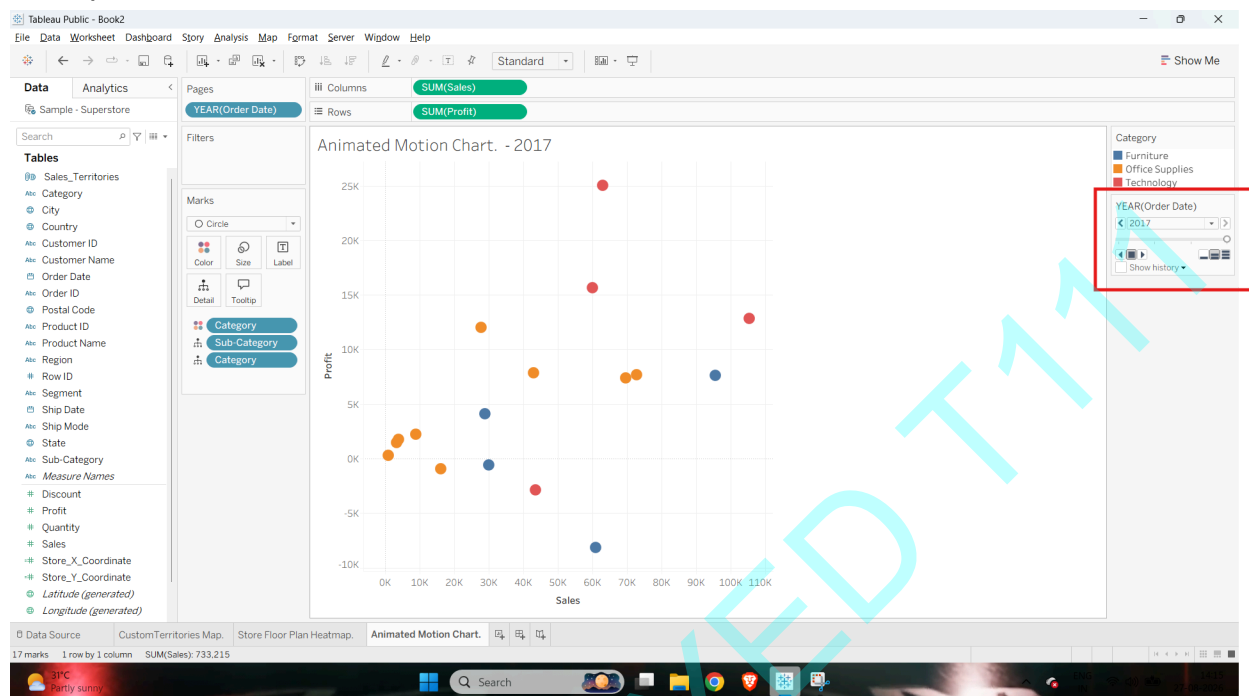

2. Right-click the Order Date pill on the Pages shelf --> select Year (discrete YEAR(Order Date)).

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

3. A Pages Control Player will appear on the right side of the canvas with Play, Pause, and Speed controls.

Step 3: Enable Motion History and Trails

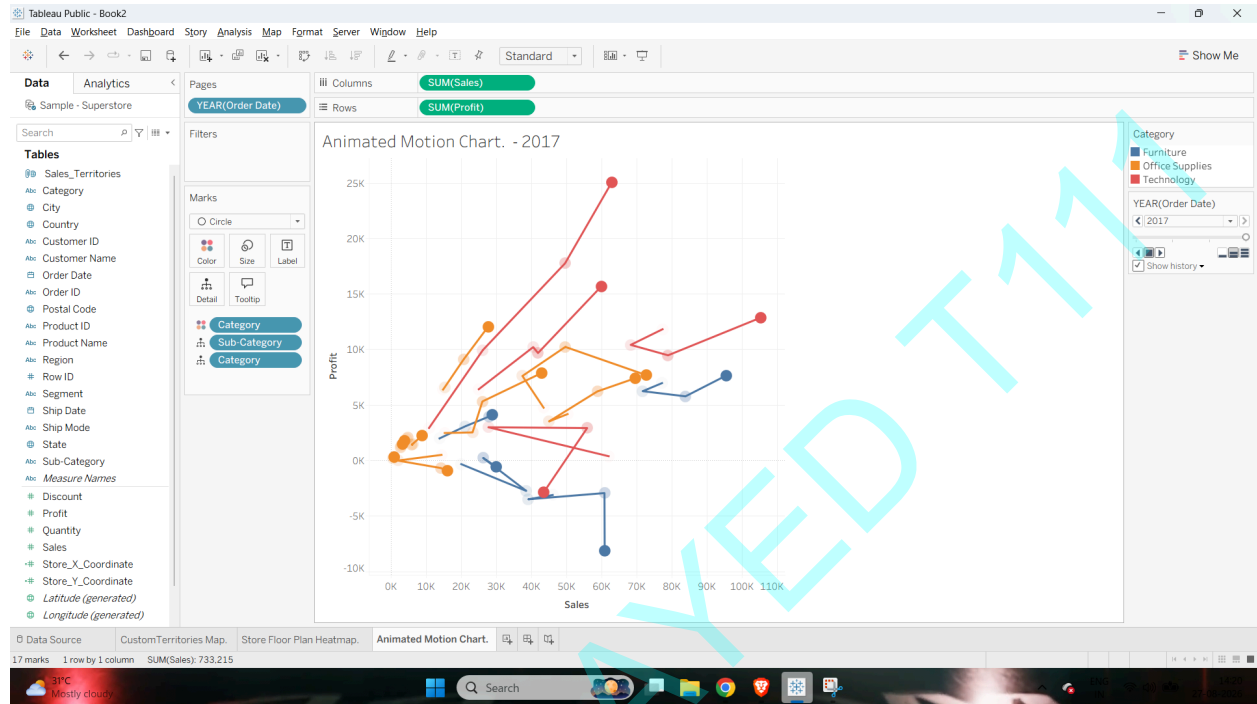

1. On the Pages Control panel on the right:
 - o Check the box for Show History.
 - o Click the dropdown arrow next to Show History to configure animation trail settings:
 - Marks to show history for: Select All.
 - Show: Select Both (Marks and Trails).
 - Color: Choose a subtle faded trail color.
 - Fade: Set to 50%.

SHETH MVLU COLLEGE

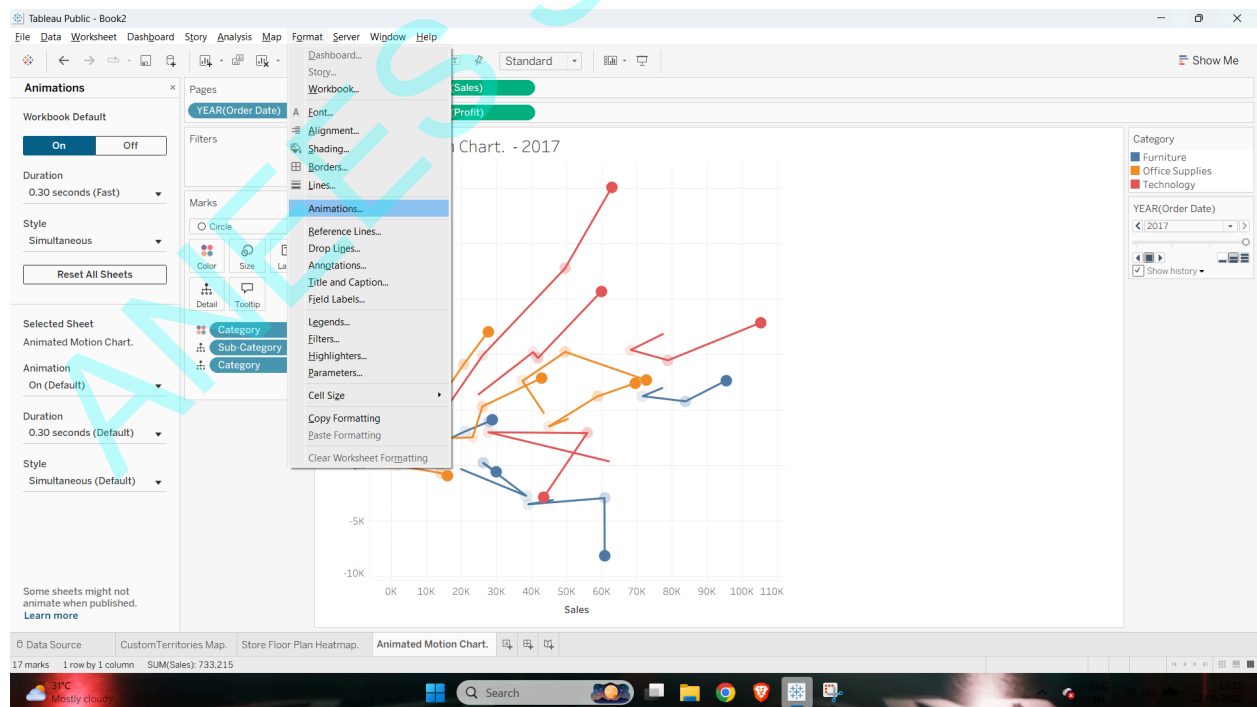

SUBJECT:- TABLEAU

2. Play the Animation: o Set playback speed to medium
(\blacktriangleright\blacktriangleright). o Click the Play button (\blacktriangleright). o Observe: Circles glide across the Sales/Profit coordinate space, leaving persistent trajectory lines showing YoY growth and margin acceleration.

Step 4: Enable Built-in Tableau Client Animations

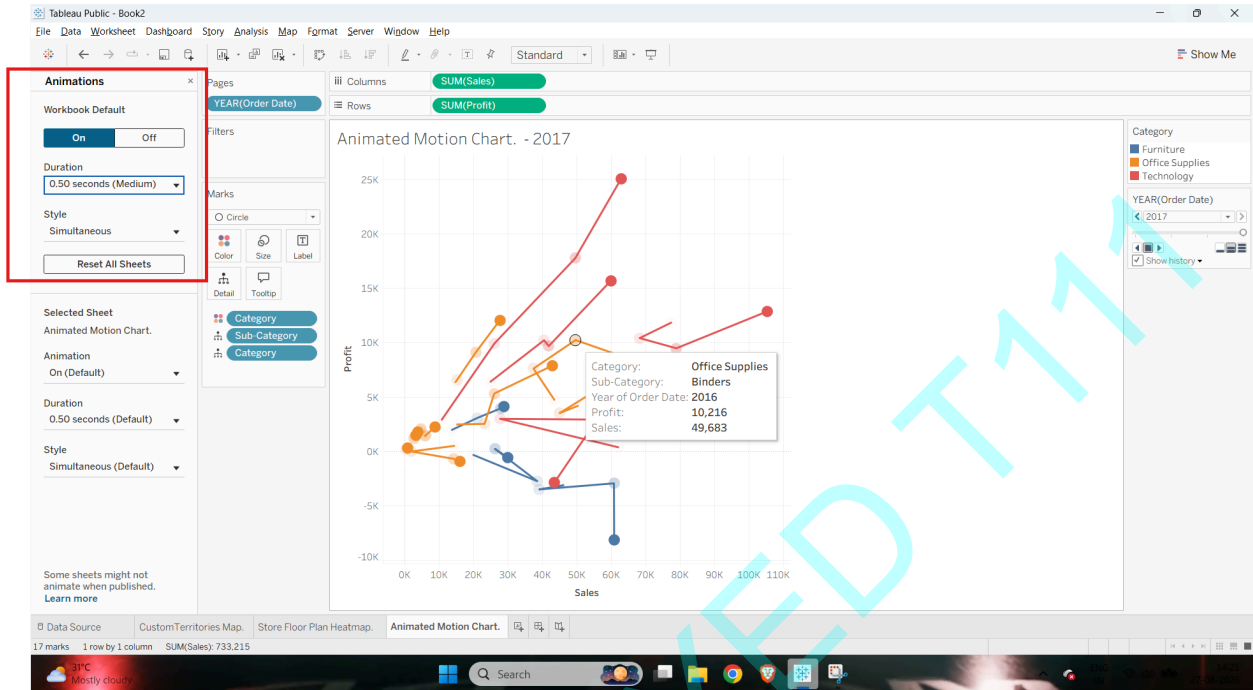

1. From the top application menu bar, select Format --> Animations....

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

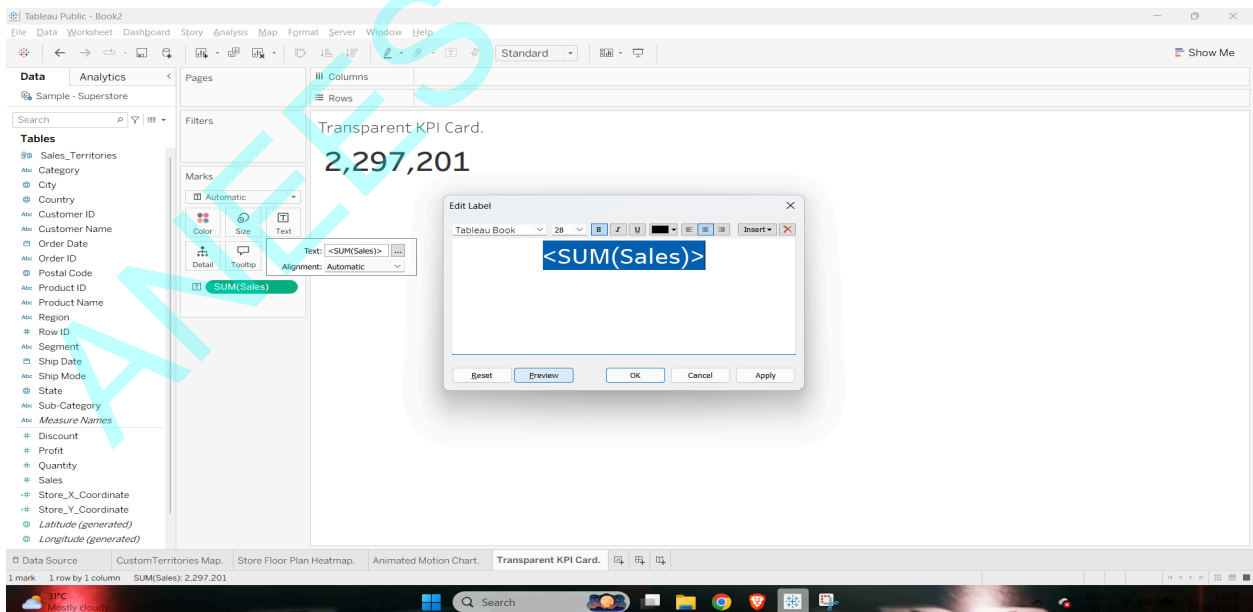

- In the left-hand Animations pane:
 - o Set Workbook Default to On.
 - o Set Duration to 1.00 seconds (Slow) or 0.50 seconds (Medium).
 - o Set Style to Simultaneous.

Task 2: Apply Sheet and Dashboard Transparency

Step 1: Build a Transparent KPI Card Worksheet

- Create a new worksheet named: Transparent KPI Card.
- Drag Sales onto the Text tile on the Marks card.
- Click Text --> increase font size to 28pt Bold and set font color to white (#FFFFFF).

SHETH MVLU COLLEGE

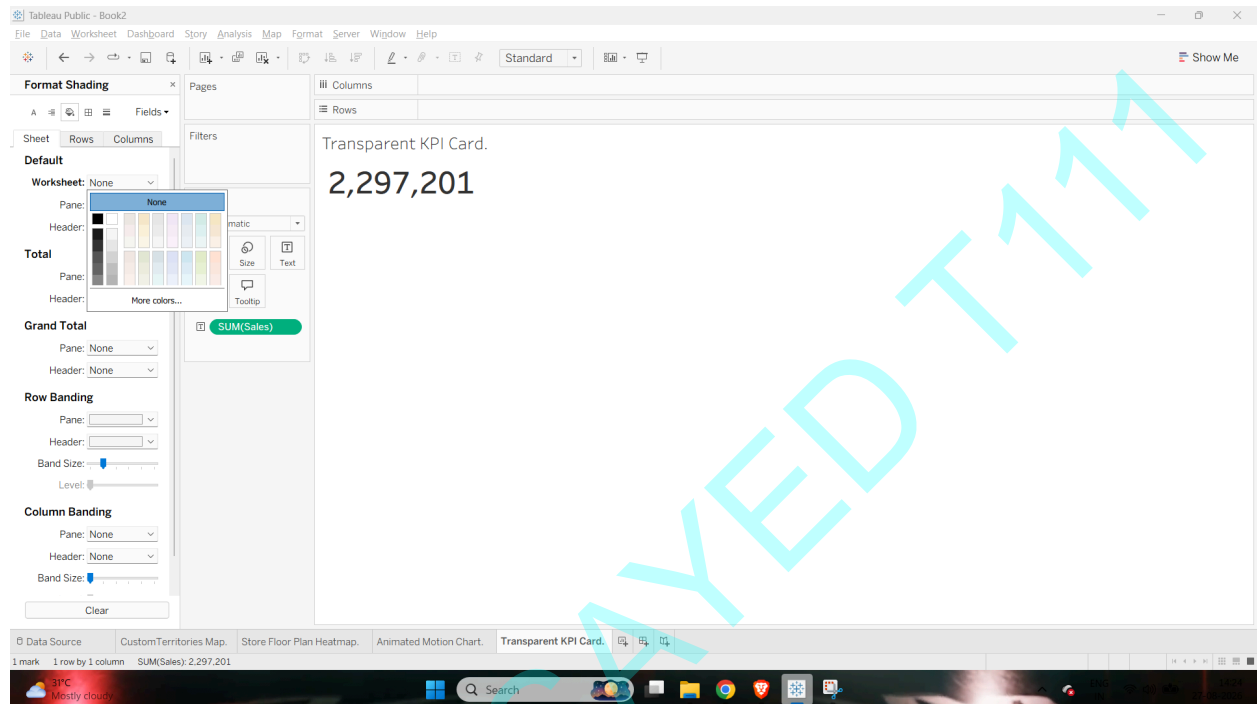

SUBJECT:- TABLEAU

4. Set worksheet background to 100% Transparent:

- o From the top menu, select Format --> Shading....

- o In the Format Shading pane on the left, under Worksheet, set the color dropdown to None (transparent).

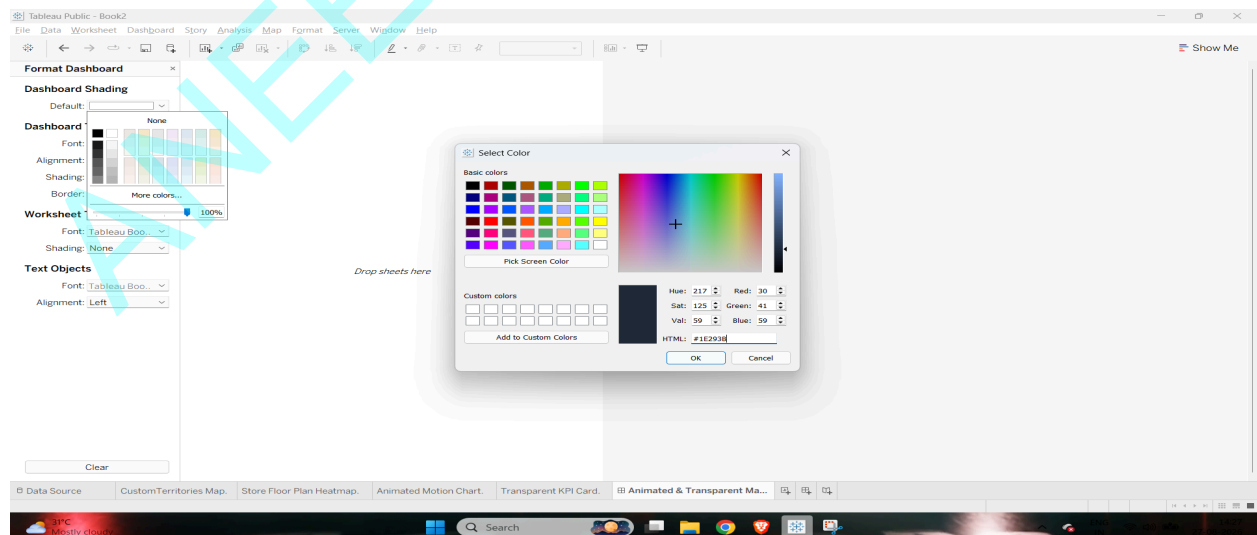

- o Under Pane, set to None.

Step 2: Assemble the Transparent Layered Dashboard

1. Create a new Dashboard and name it: Animated & Transparent Master View.

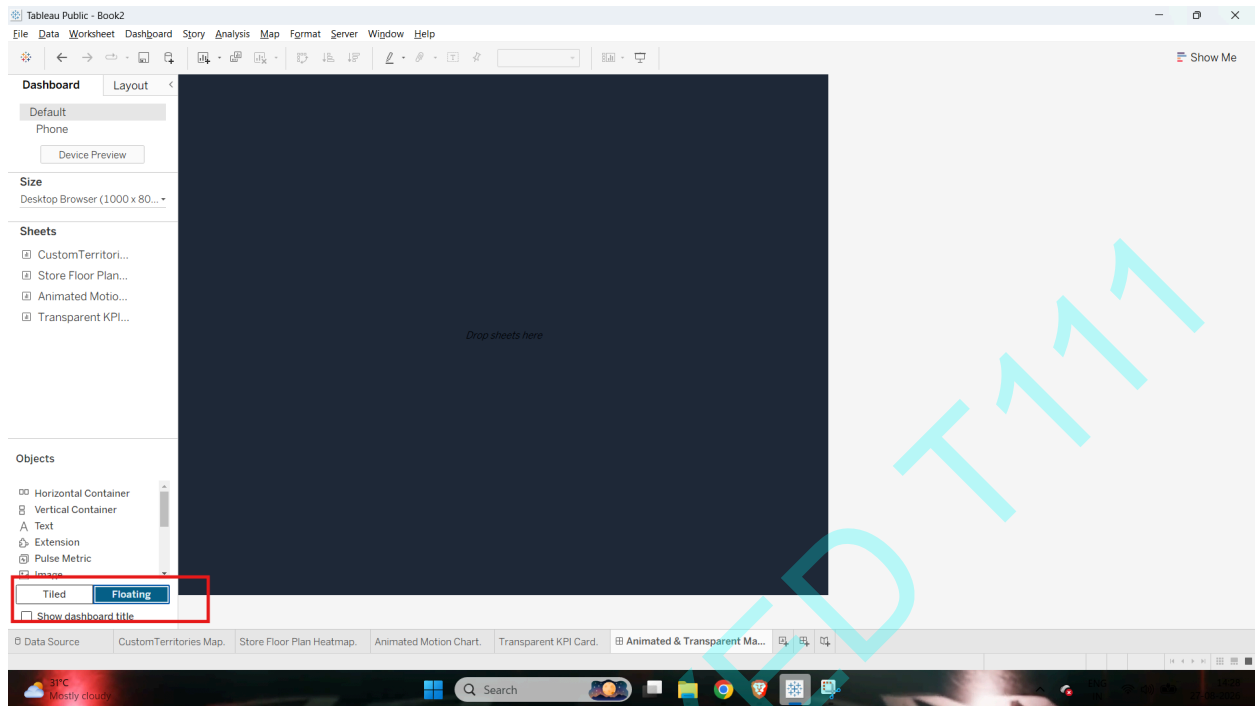

2. Under Dashboard properties, set the background color: o Select Format --> Dashboard... --> set Dashboard Shading to a deep navy or dark slate color (e.g., #1E293B).

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU

3. In the Objects section on the left: o Select the Floating radio button (instead of Tiled).

4. Drag your Store Floor Plan Heatmap (or Custom Territories Map) onto the dashboard canvas as the base background layer and resize it to fill the screen.

5. Drag your Transparent KPI Card onto the canvas as a Floating object directly over the map/image. o Notice: Because the KPI worksheet shading was set to None, the underlying map/floorplan graphic remains 100% visible through the text card without any white rectangular box.

6. Drag your Animated Motion Chart onto the dashboard as a floating panel to complete the interactive control deck.

SHETH MVLU COLLEGE

SUBJECT:- TABLEAU
